DIS Workshop, April 7, 2008

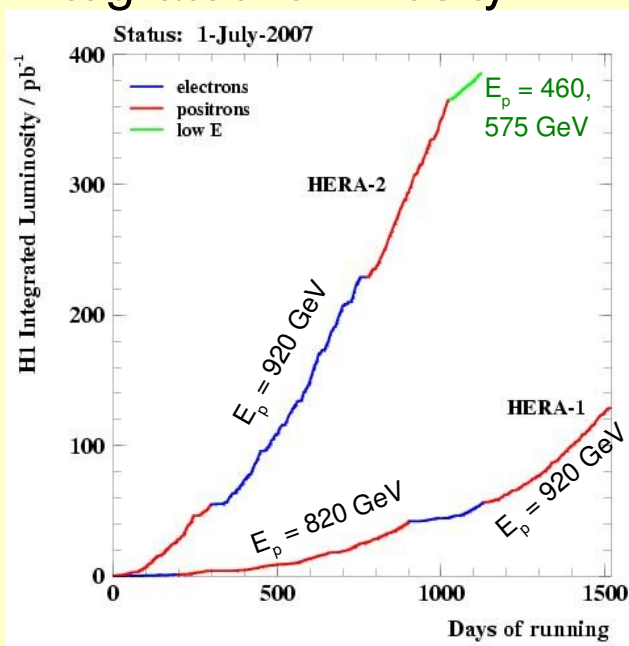

HERA Harvest

data taking
until mid 2007

integrated luminosity:

low energy: $\sim 20 \text{ pb}^{-1}$

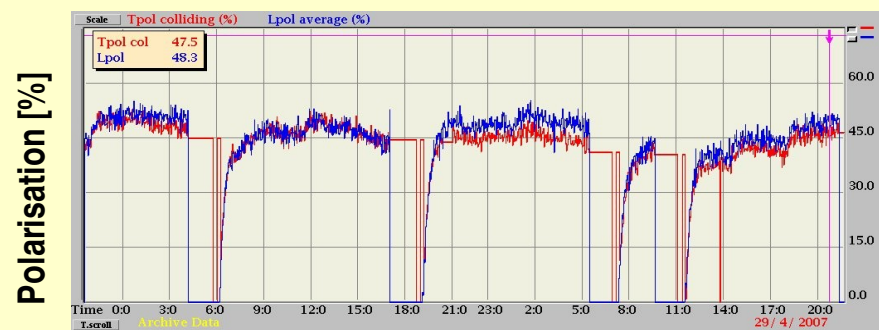

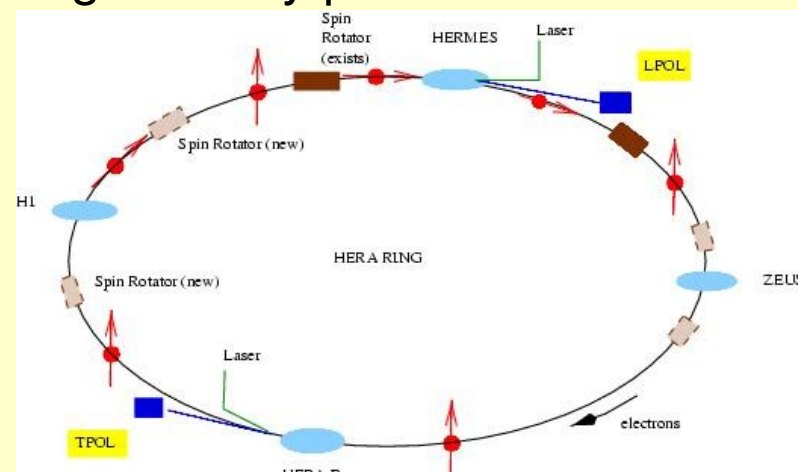

high energy:

$184 \text{ pb}^{-1} \text{ e}^- \text{p}$

$294 \text{ pb}^{-1} \text{ e}^+ \text{p}$

$488 \text{ pb}^{-1} \text{ total}$

longitudinally polarised e^\pm beams:

polarisation of more than 45%

We thank the HERA machine people for
delivering a vast amount of beautiful data
on ep collisions

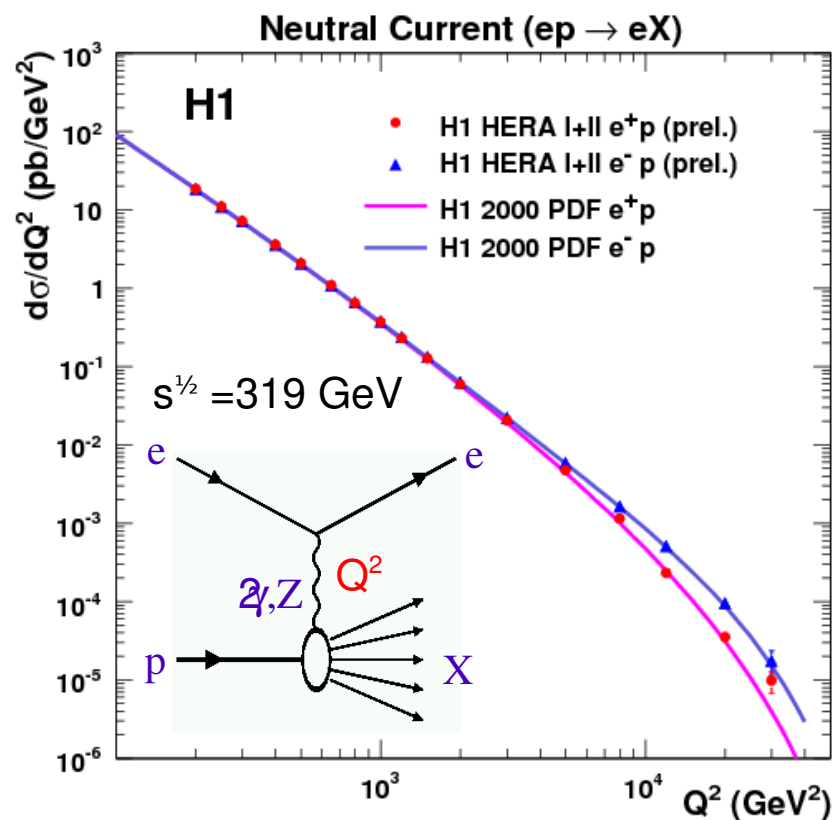

HERA Program/Outline

- Searches + Electroweak Physics
 - ⇒ HERA testing physics beyond the SM with ($2 \times 0.5 \text{ fb}^{-1}$)
- Proton Structure
 - ⇒ HERA the microscope
- Exclusive Processes:
 - Perturbative QCD
 - Soft QCD and Diffraction
 - Heavy Quarks
 - ⇒ HERA probing QCD at small x and high Q^2
- Conclusion

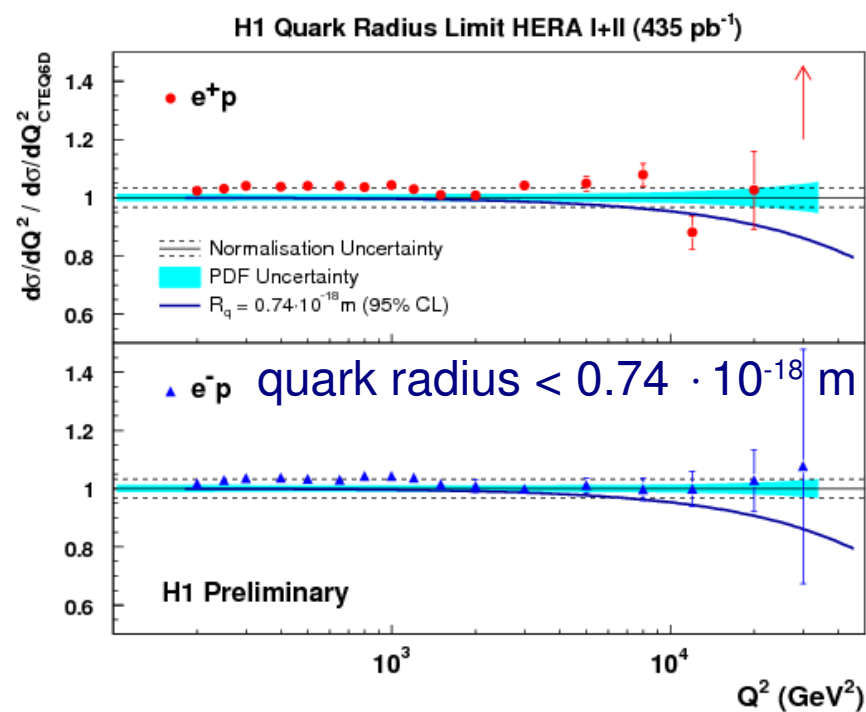

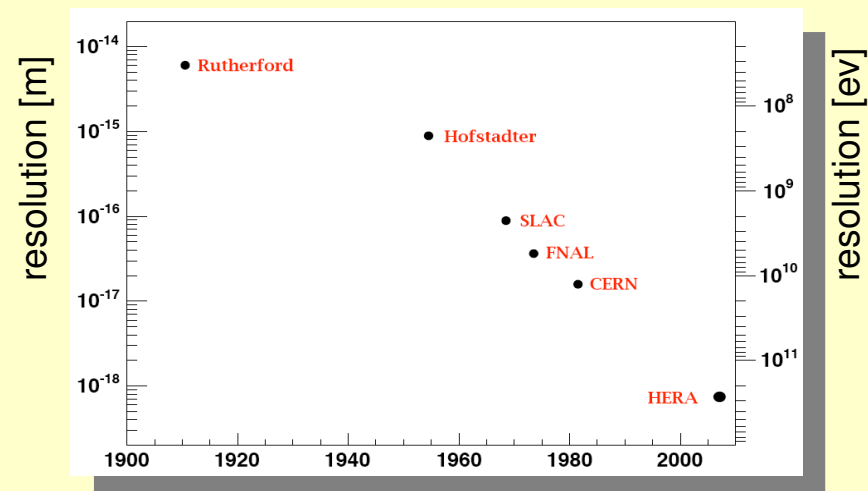

Neutral Currents @ high Q^2

full HERA statistics:

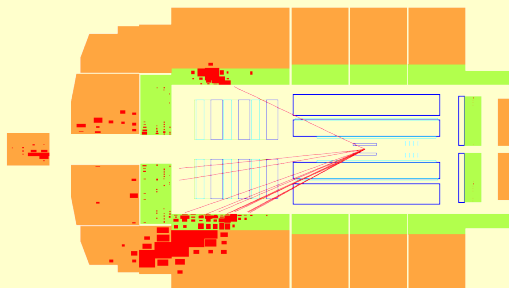

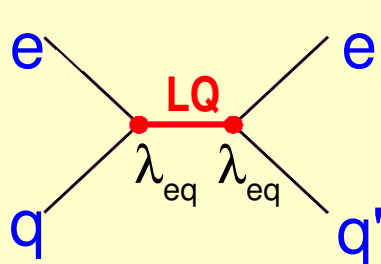

- high precision data
- γ -Z interference at high Q^2

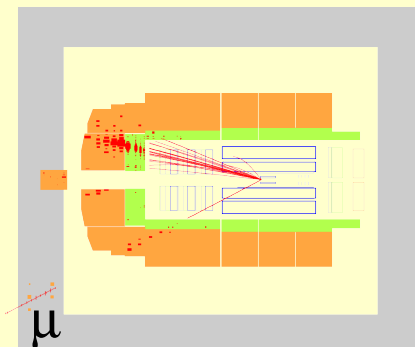

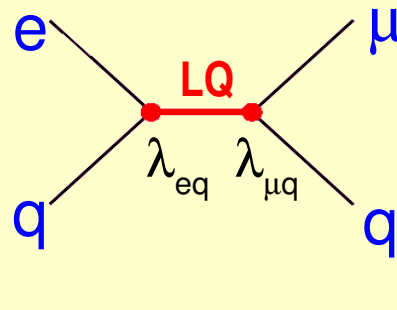

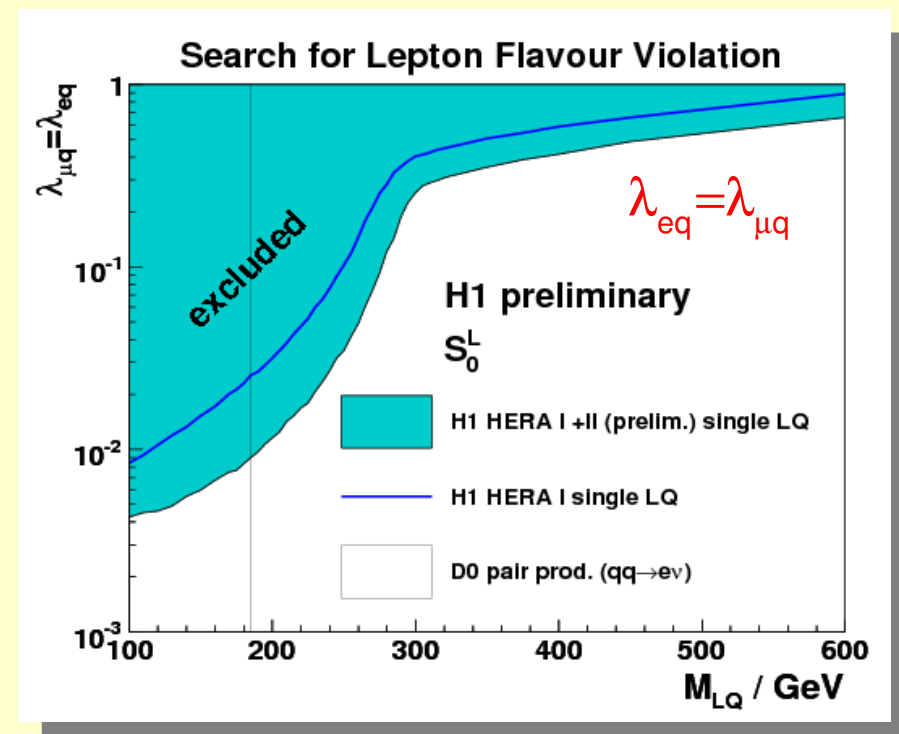

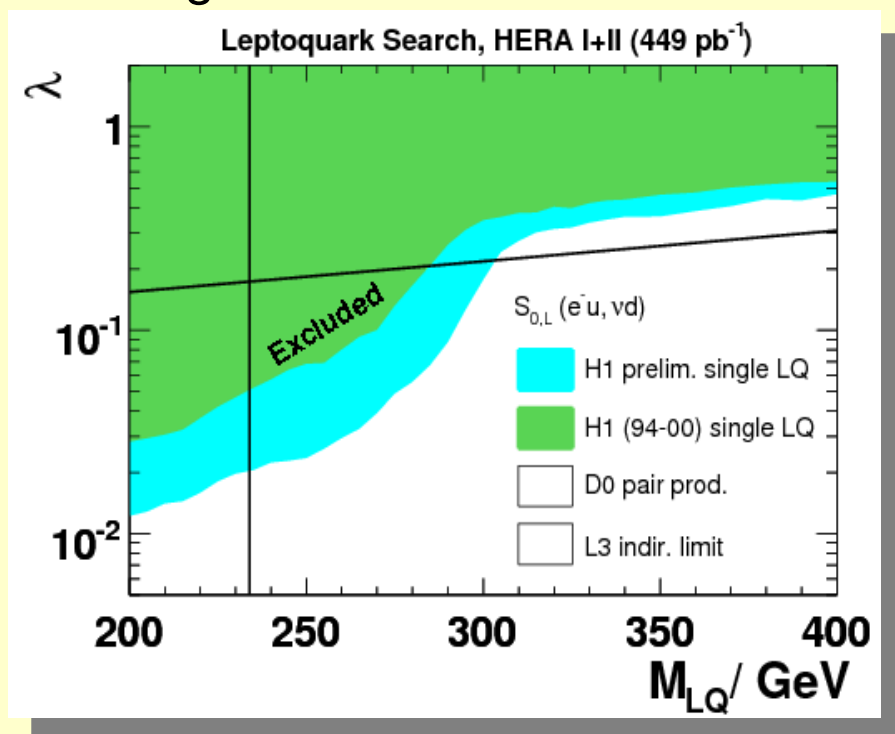

Search for Leptoquarks and LFV

first generation LQ search

LQ coupling to 1st and 2nd generation

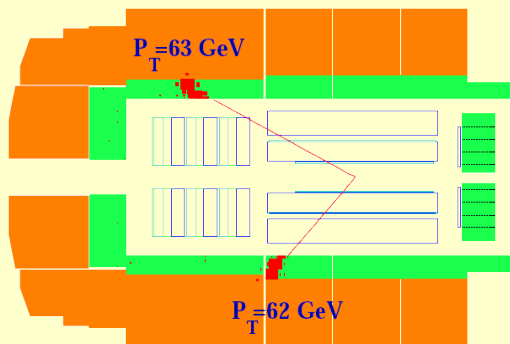

unique sensitivity to high mass LQs!

Multi-Lepton Final State

- Search for multi-electrons:
(Eur Phys J C31 (2003) 17)

possible signature for:

$$H^{++} \rightarrow e^+ e^+$$

High P_T results H1/ZEUS:

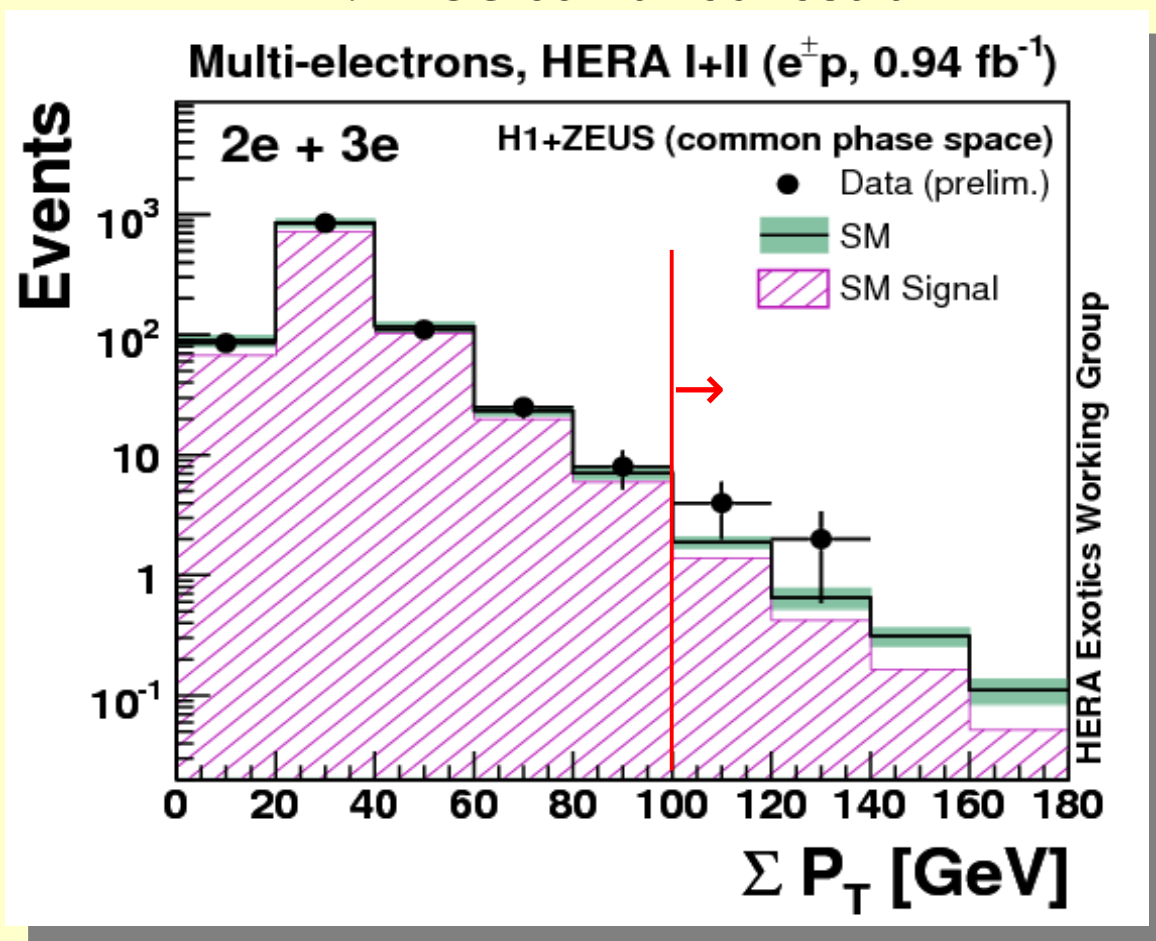

2e :	5	(3.41 ± 0.37)
3e :	4	(1.89 ± 0.24)

- Other Multi-Lepton channels investigated by H1:

$$\mu\mu, e\mu\mu, e\mu$$

⇒ to be combined with ZEUS

H1/ZEUS combined result

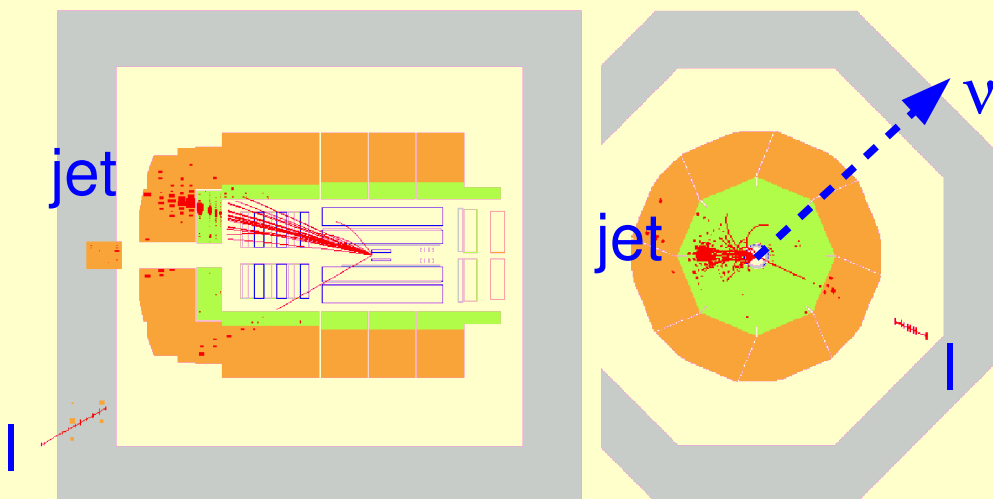

→ data consistent with SM prediction

Isolated Leptons and p_T^{miss}

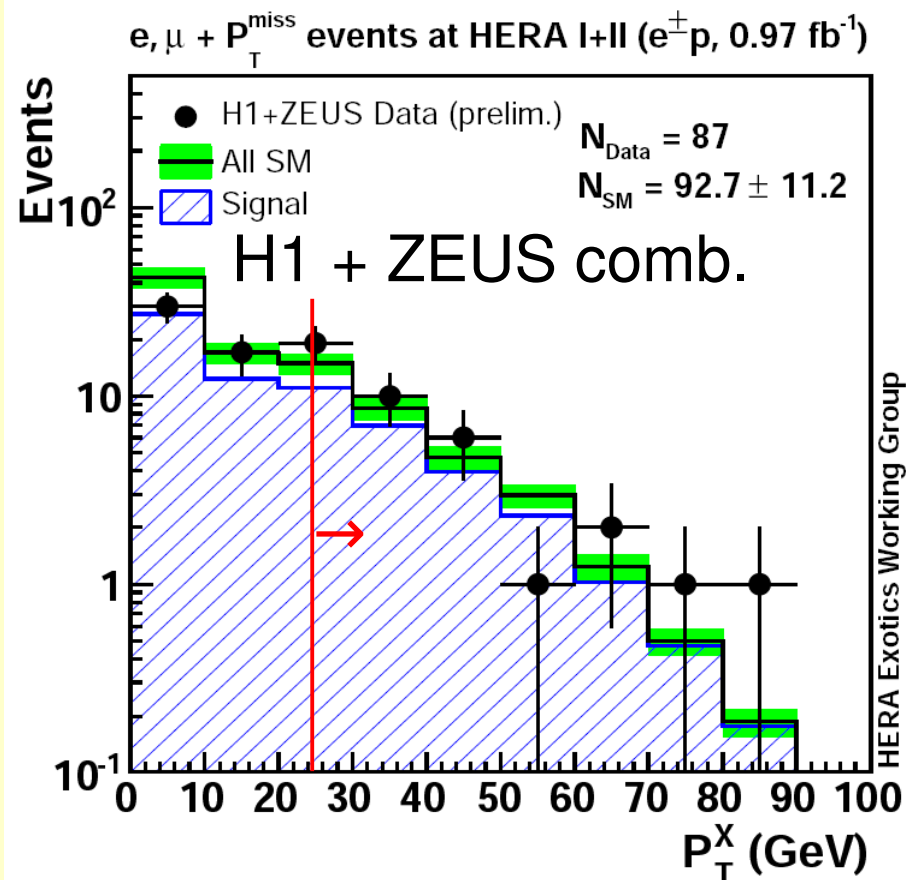

- topology: (H1 Collab., Phys. Lett. B561 (2003) 241)

signature for single W prod.

$$ep \rightarrow eX W \rightarrow l\nu$$

Results for $p_T^X > 25 \text{ GeV}$ (H1/ZEUS $e^\pm p$):

electron	muon	electron + muon
16 (13.3 ± 1.7)	13 (12.0 ± 0.24)	29 (25.3 ± 3.2)

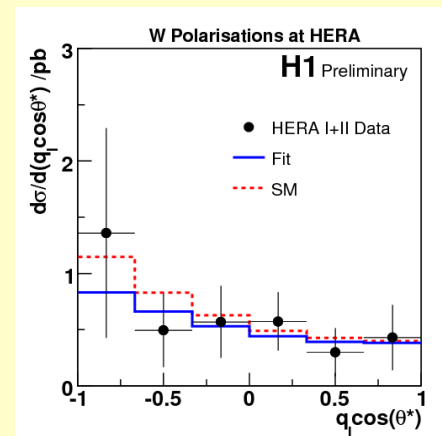

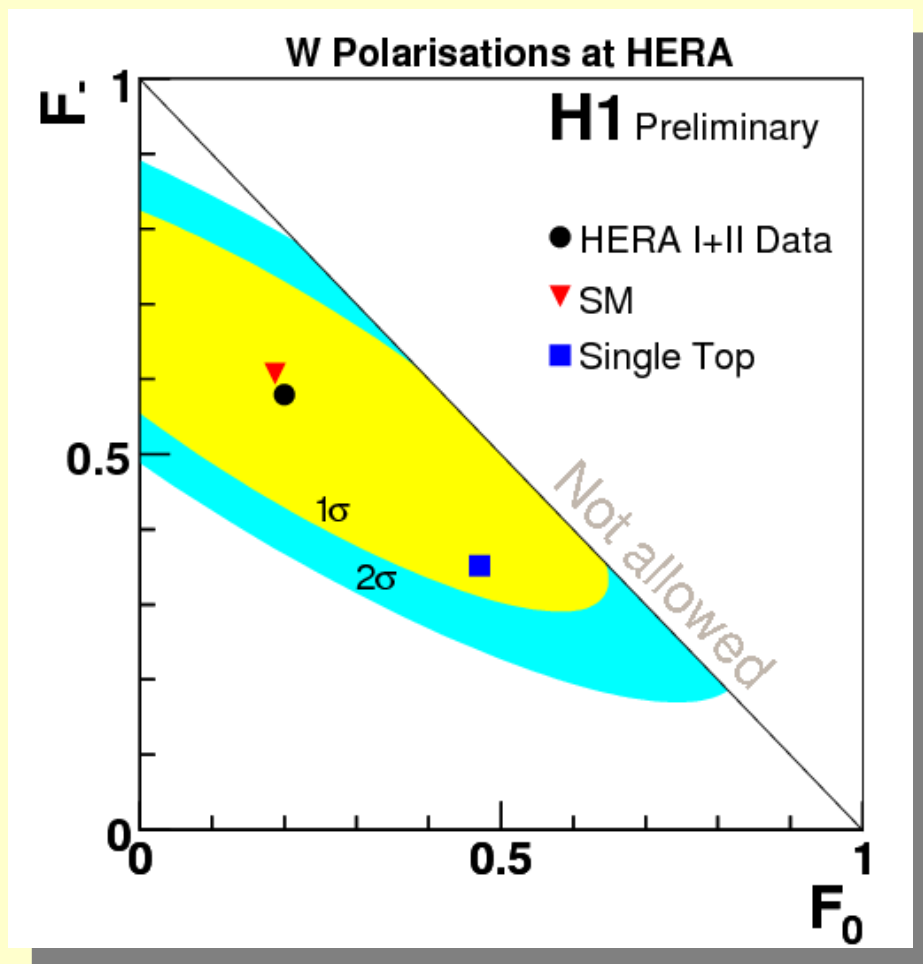

→ H1/ZEUS combined data consistent with SM prediction

W-Production and Polarisation

Determination of the W polarisation:

$$\frac{dN}{d\cos\theta^*} \propto F_+ \cdot (1 + \cos\theta^*)^2 + F_0 \cdot 2(1 + \cos\theta^{*2}) + F_- \cdot (1 - \cos\theta^*)^2$$

fit W decay angle

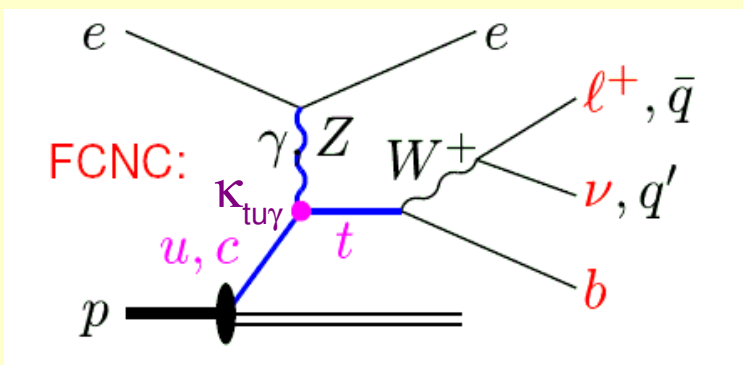

→ H1 data consistent with SM prediction

Anomalous Single Top Production

SM cross section negligible at HERA

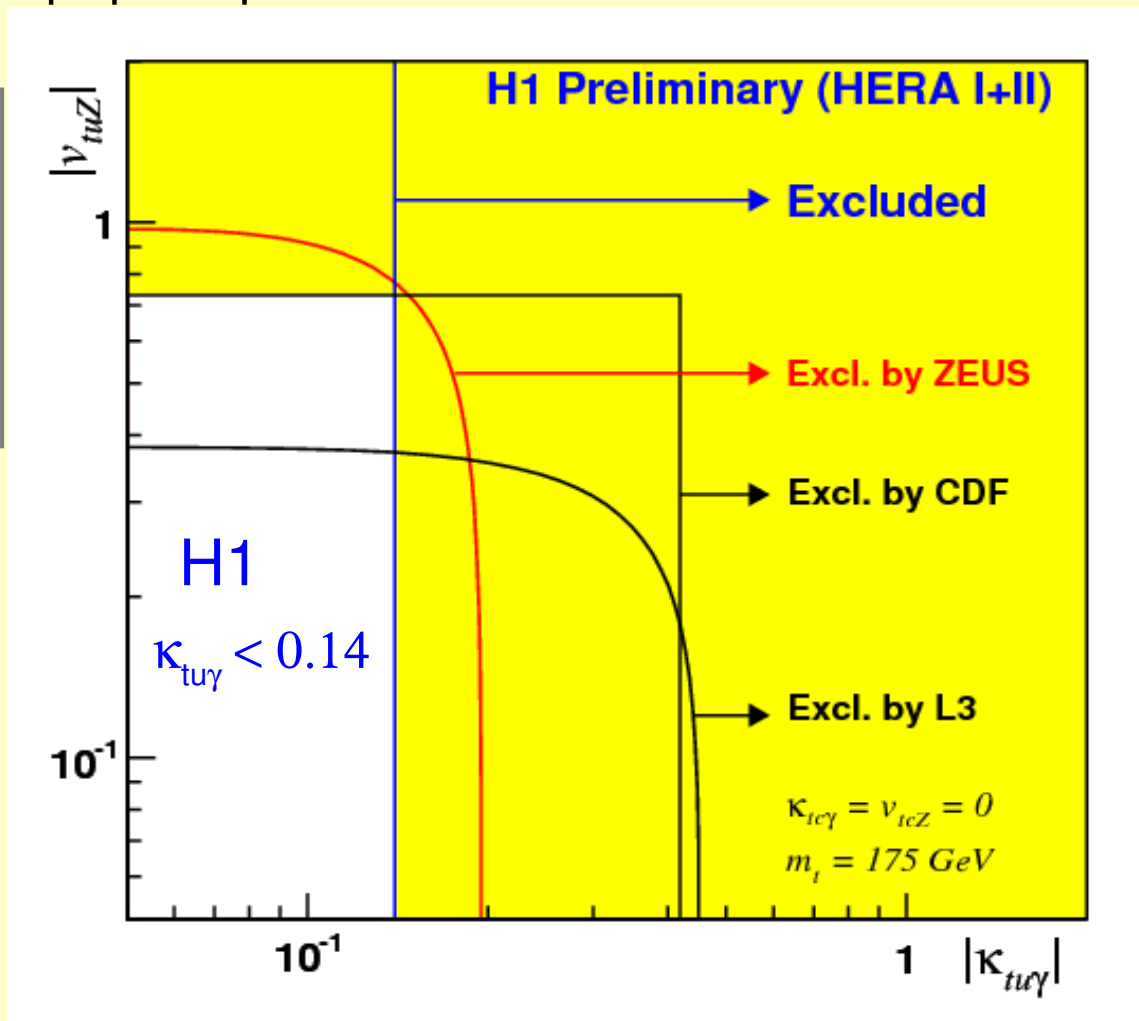

→ high sensitivity to anomalous top quark production

final states:

- 3-jet
- lepton + jet + p_T^{miss}

HERA most sensitive
on coupling $\kappa_{t\gamma}$

Proton Structure

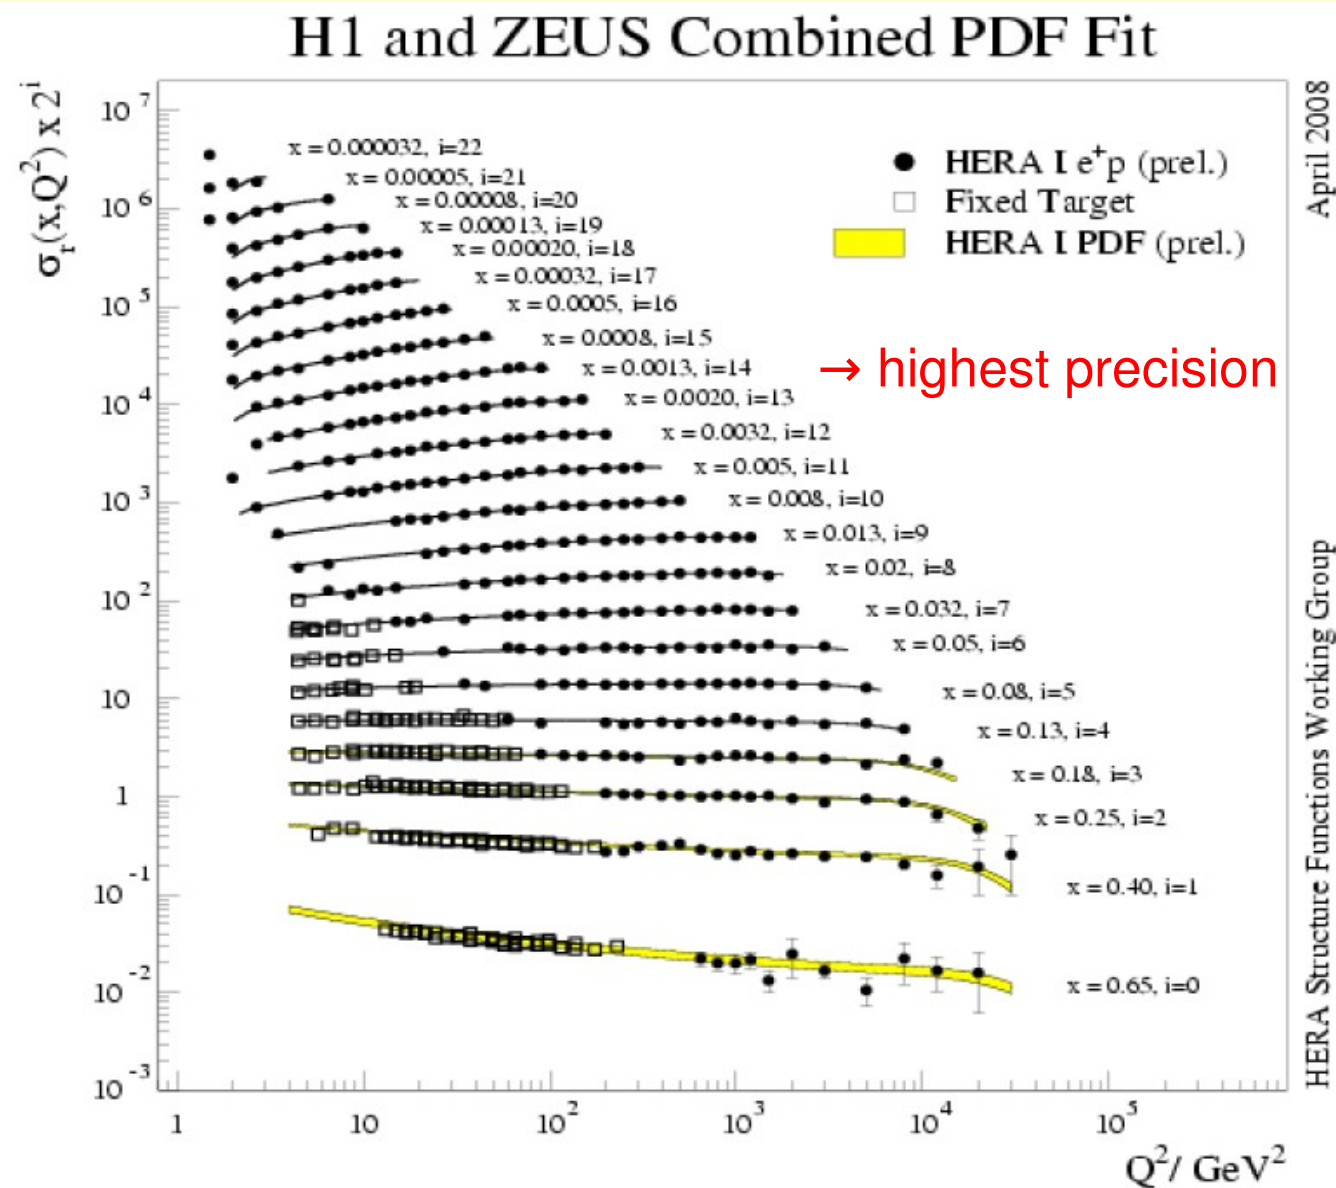

- New Neutral Current Cross Sections from H1/ZEUS combination
⇒ highest statistical precision
- Measurement of the longitudinal structure function F_L :
⇒ first direct measurement at low x

Proton Structure

Combination of H1/ZEUS HERA I cross sections (NC):

→ highest precision

→ statistical and also systematic errors largely reduced

also new preliminary HERA I PDF fit

see next talk by
→ H. Abramovicz

Measurement of F_L

NC cross section:

$$\sigma_r = F_2(x, Q^2) - \frac{y^2}{1+(1-y)^2} F_L(x, Q^2)$$

$$F_2 \sim \sigma_T + \sigma_L$$

$$F_L \sim \sigma_L$$

(F_L term contributes only at high y !)

QCD:
$$F_L = \frac{\alpha_s}{4\pi} x^2 \int_x^1 \frac{dz}{z^3} \left[\frac{16}{3} F_2 + 8 \sum_q w_q^2 \left(1 - \frac{x}{z}\right) z g(z) \right]$$

- indirect method:

- F_2 extrapolation method (Phys.Lett.B393:452,1997)

- direct method:

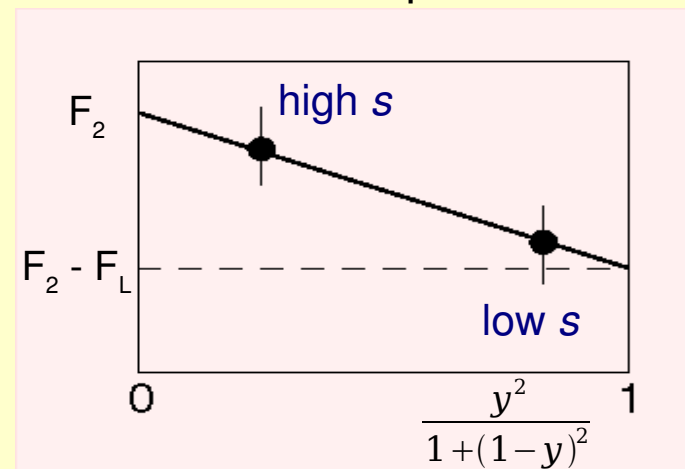

- measure σ_r for same (Q^2, x) at different y :

$$s = \frac{Q^2}{xy} \rightarrow \text{measure at different beam energies}$$

$$E_p = 920 \text{ GeV} \rightarrow \text{lower } y$$

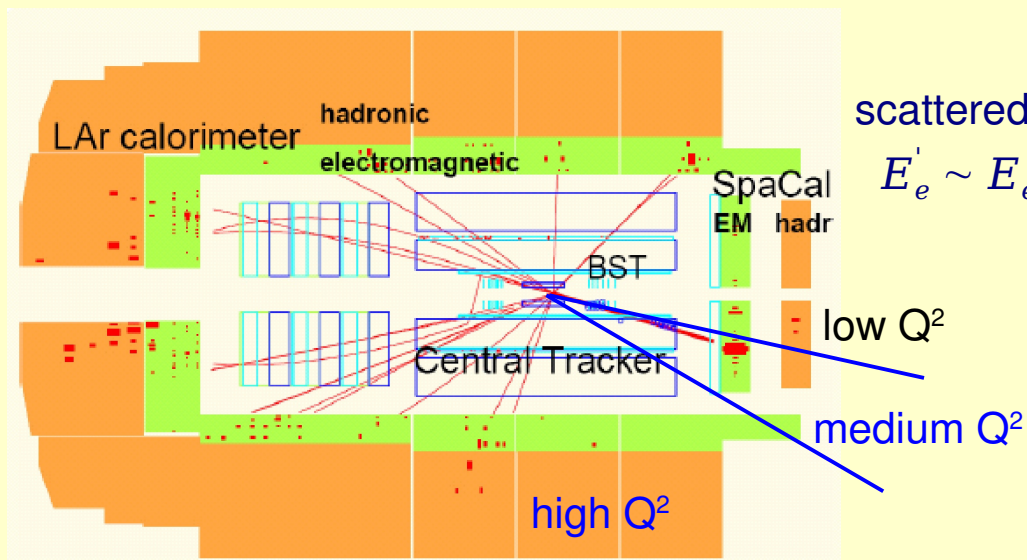

$$E_p = 460 \text{ GeV} \rightarrow \text{high } y \text{ (high BG!)}$$

Rosenbluth plot:

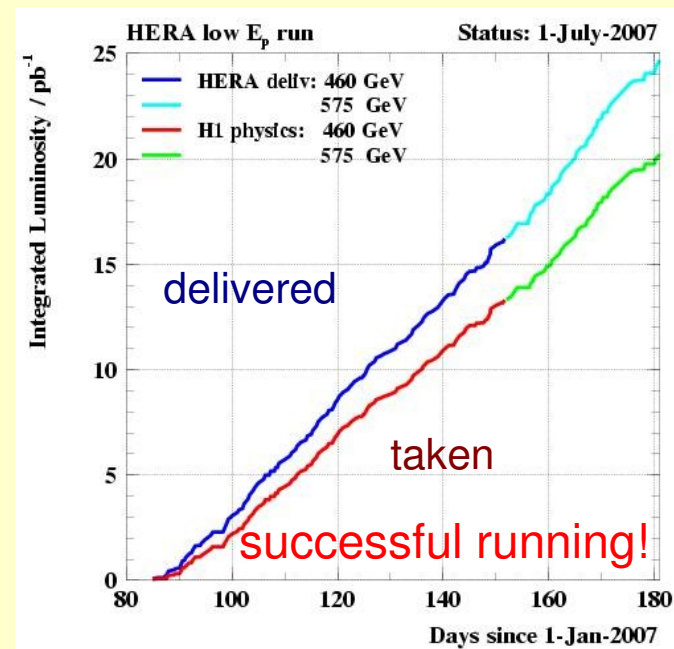

Data from Low Energy Run

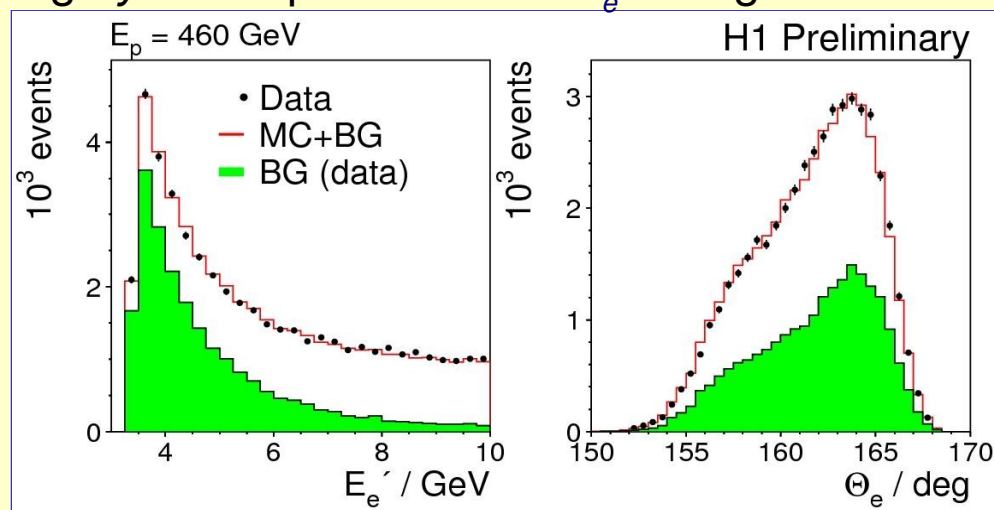

scattered electron:

$$E_e' \sim E_e(1 - y)$$

high y corresponds to low $E_e' \rightarrow$ high BG!

H1 data 2007 e^+p

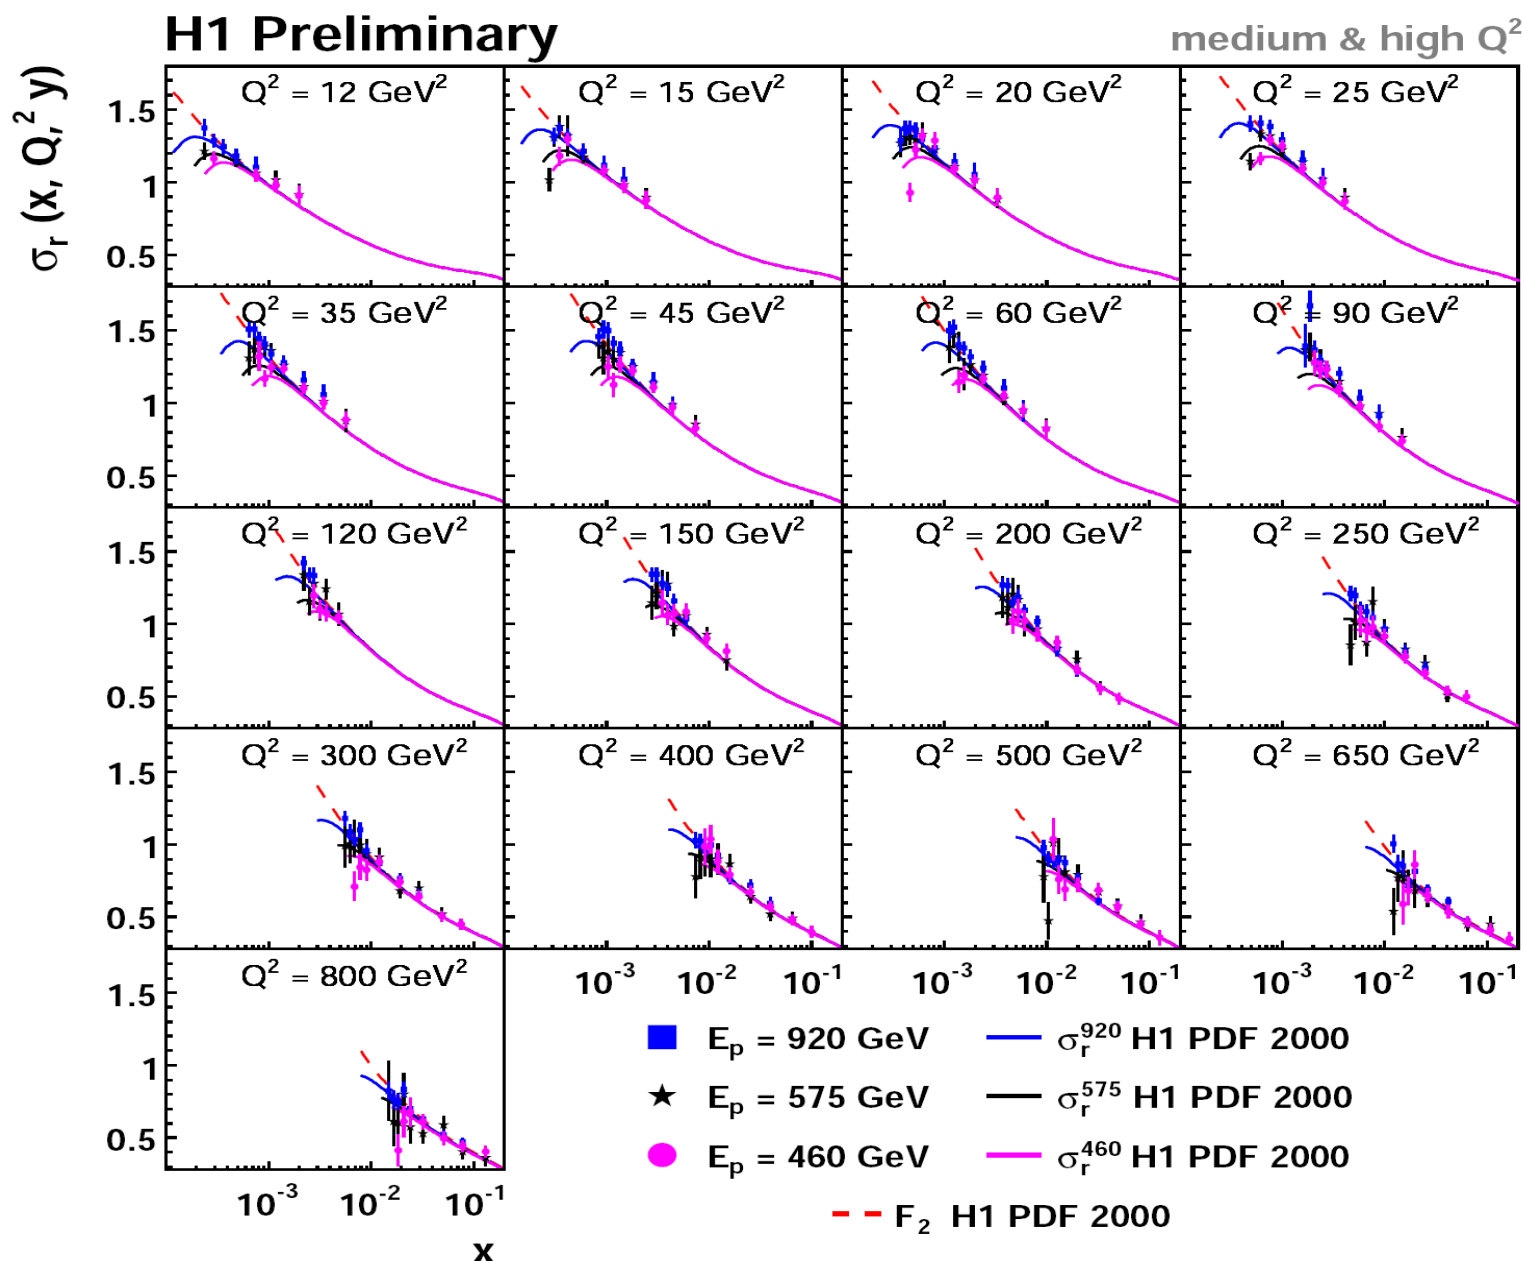

Lumi	E_p
21.9 pb^{-1}	920 GeV
6.2 pb^{-1}	575 GeV
12.4 pb^{-1}	460 GeV

background controlled by wrong charge tracks

Cross Sections for F_L

$$y \sim 1/x$$

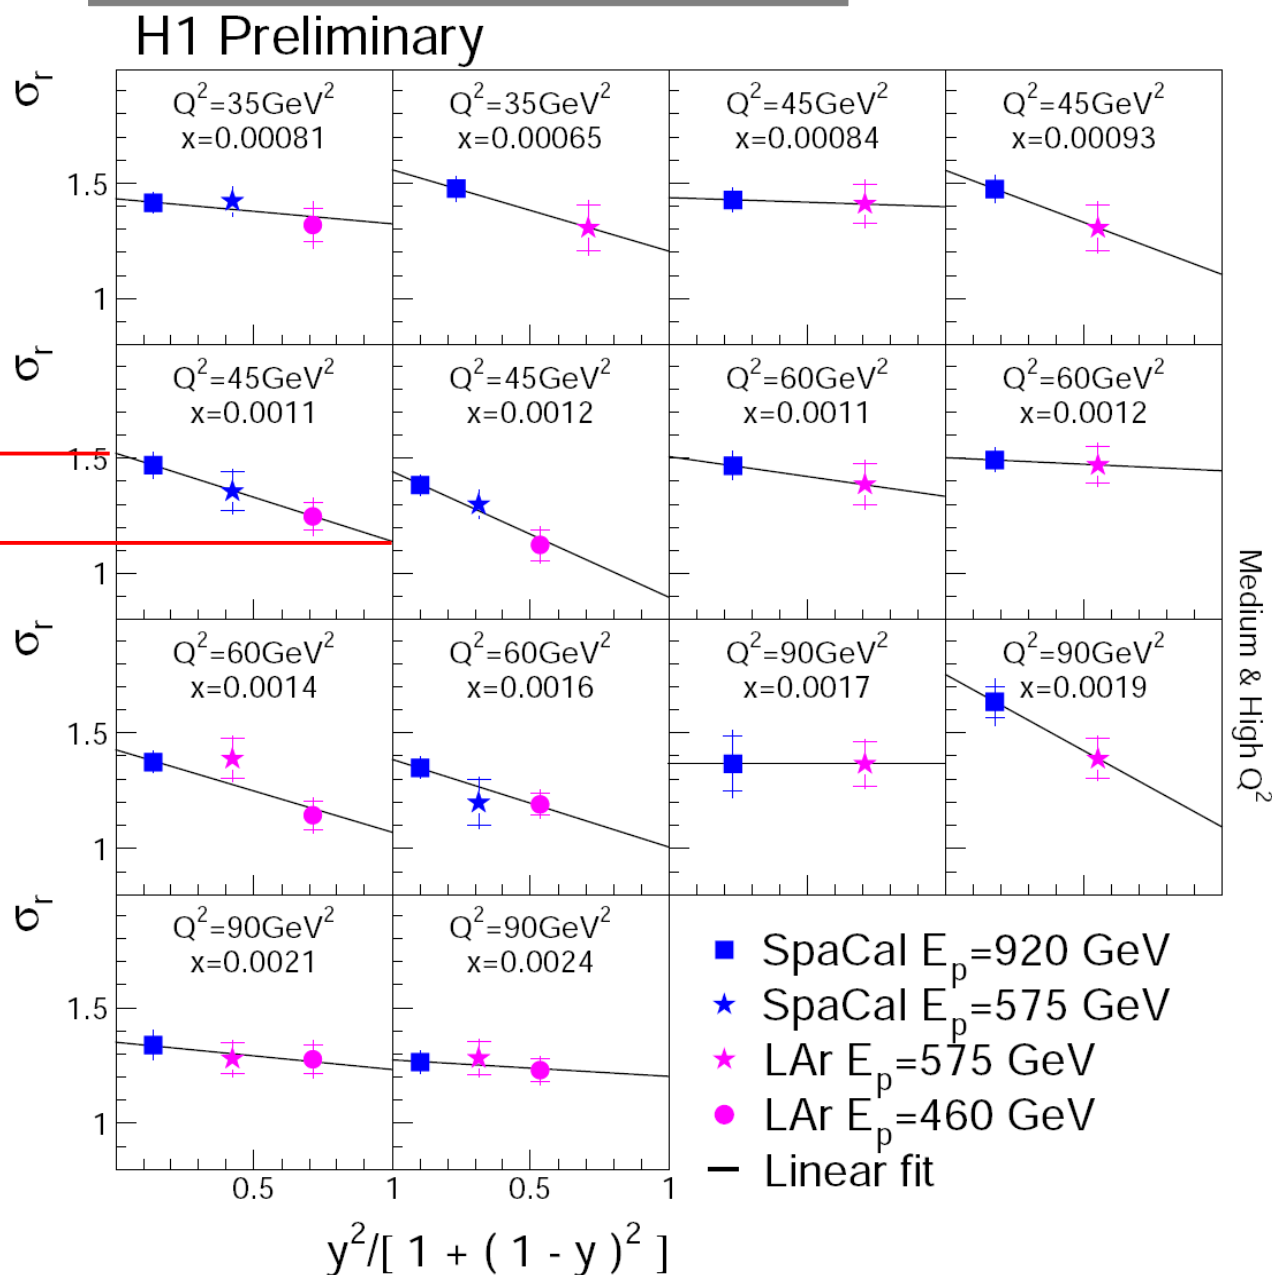

Rosenbluth Plot

Rosenbluth Plot for
Q² range:

35 < Q² < 90 GeV²

F_2
 $F_2 - F_L$

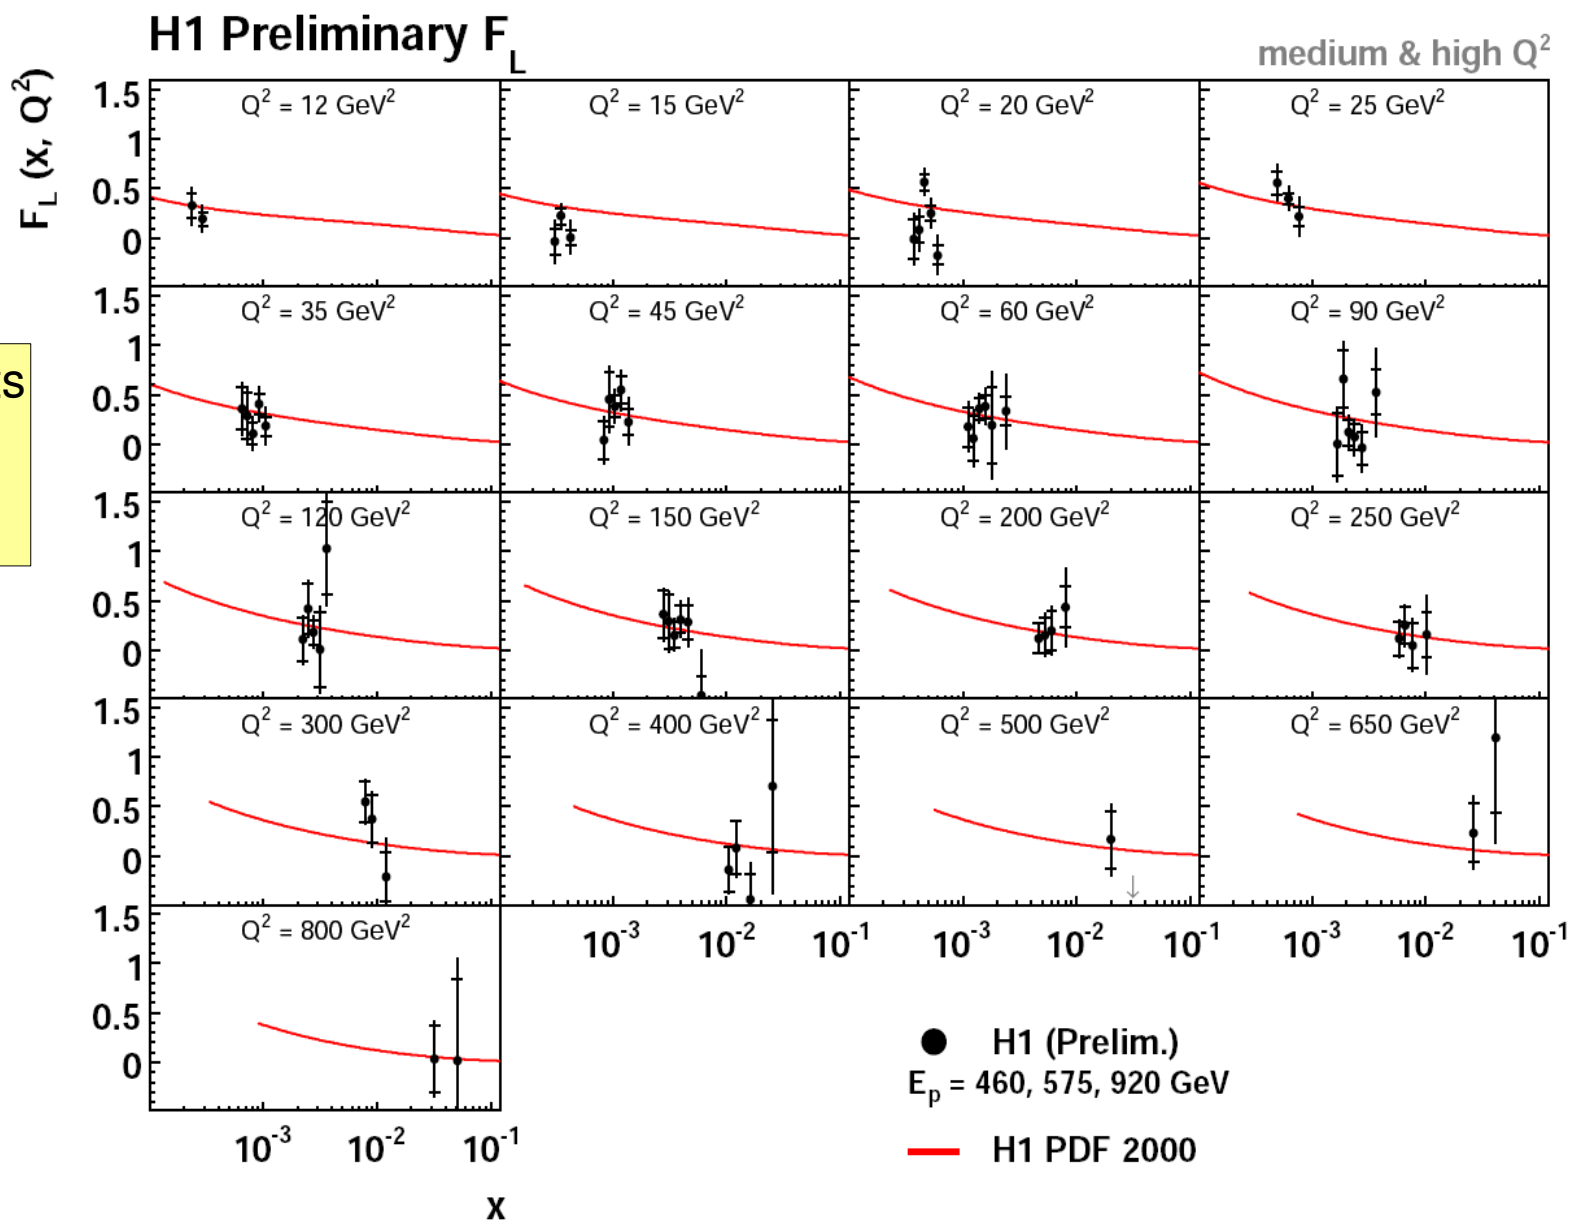

Direct Measurement of F_L

66 measurements
bins for:

$$Q^2 > 10 \text{ GeV}^2$$

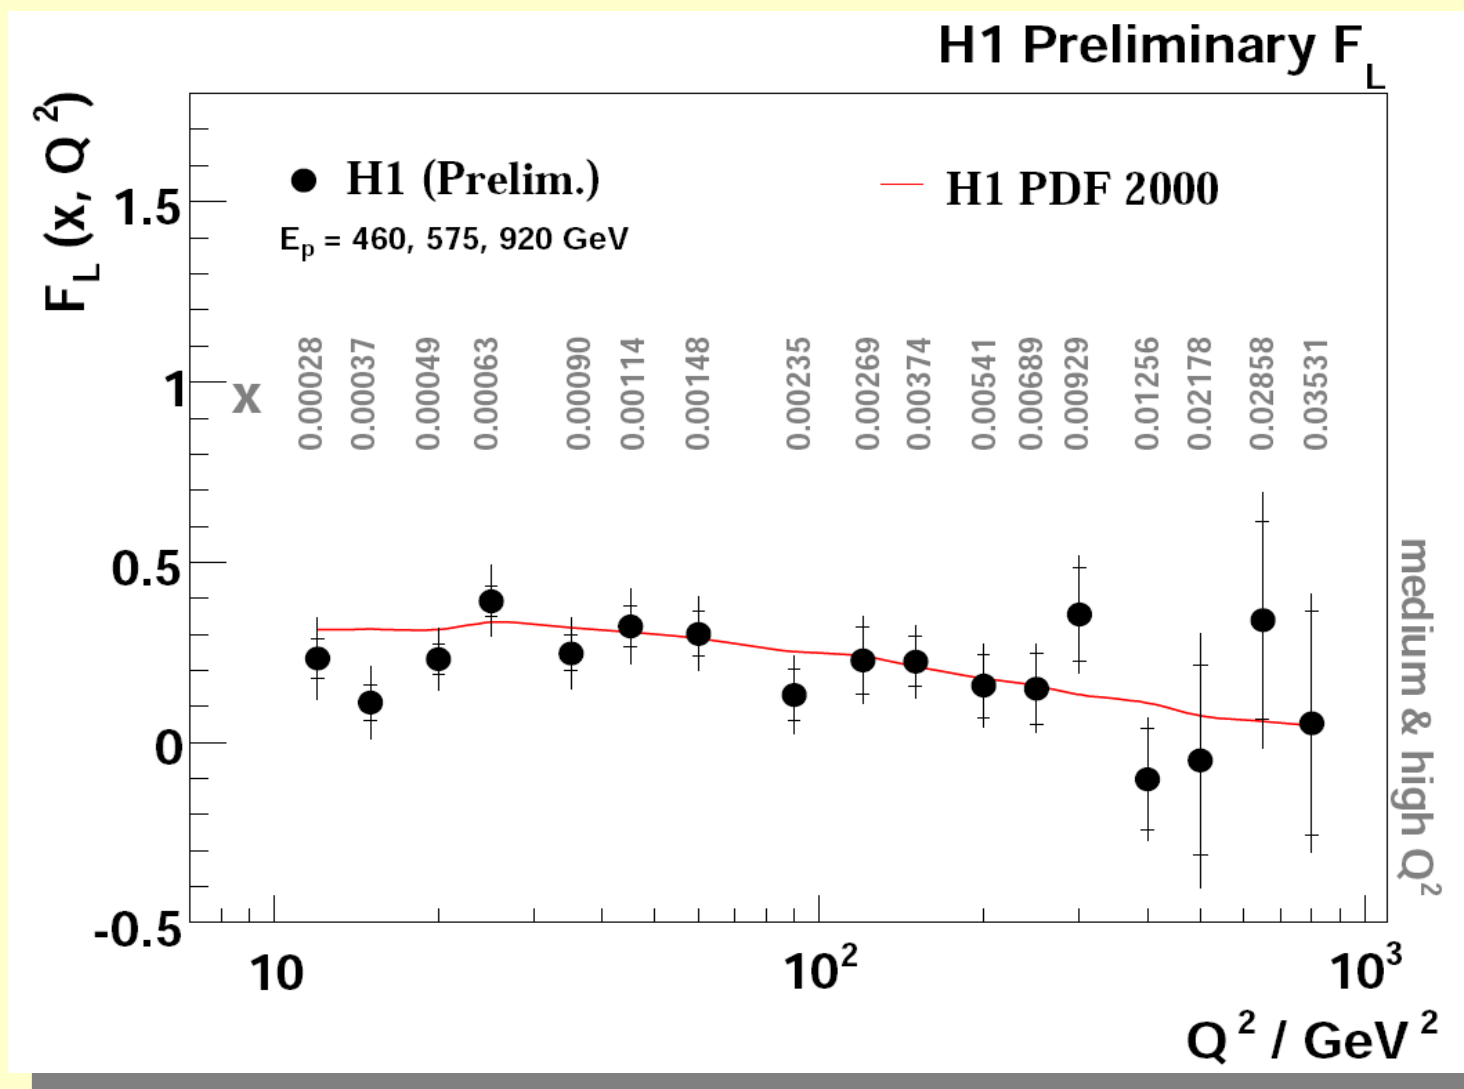

Direct Measurement of F_L

x-averaged F_L as function of Q^2 :

(first F_L results released at Moriond 2008)

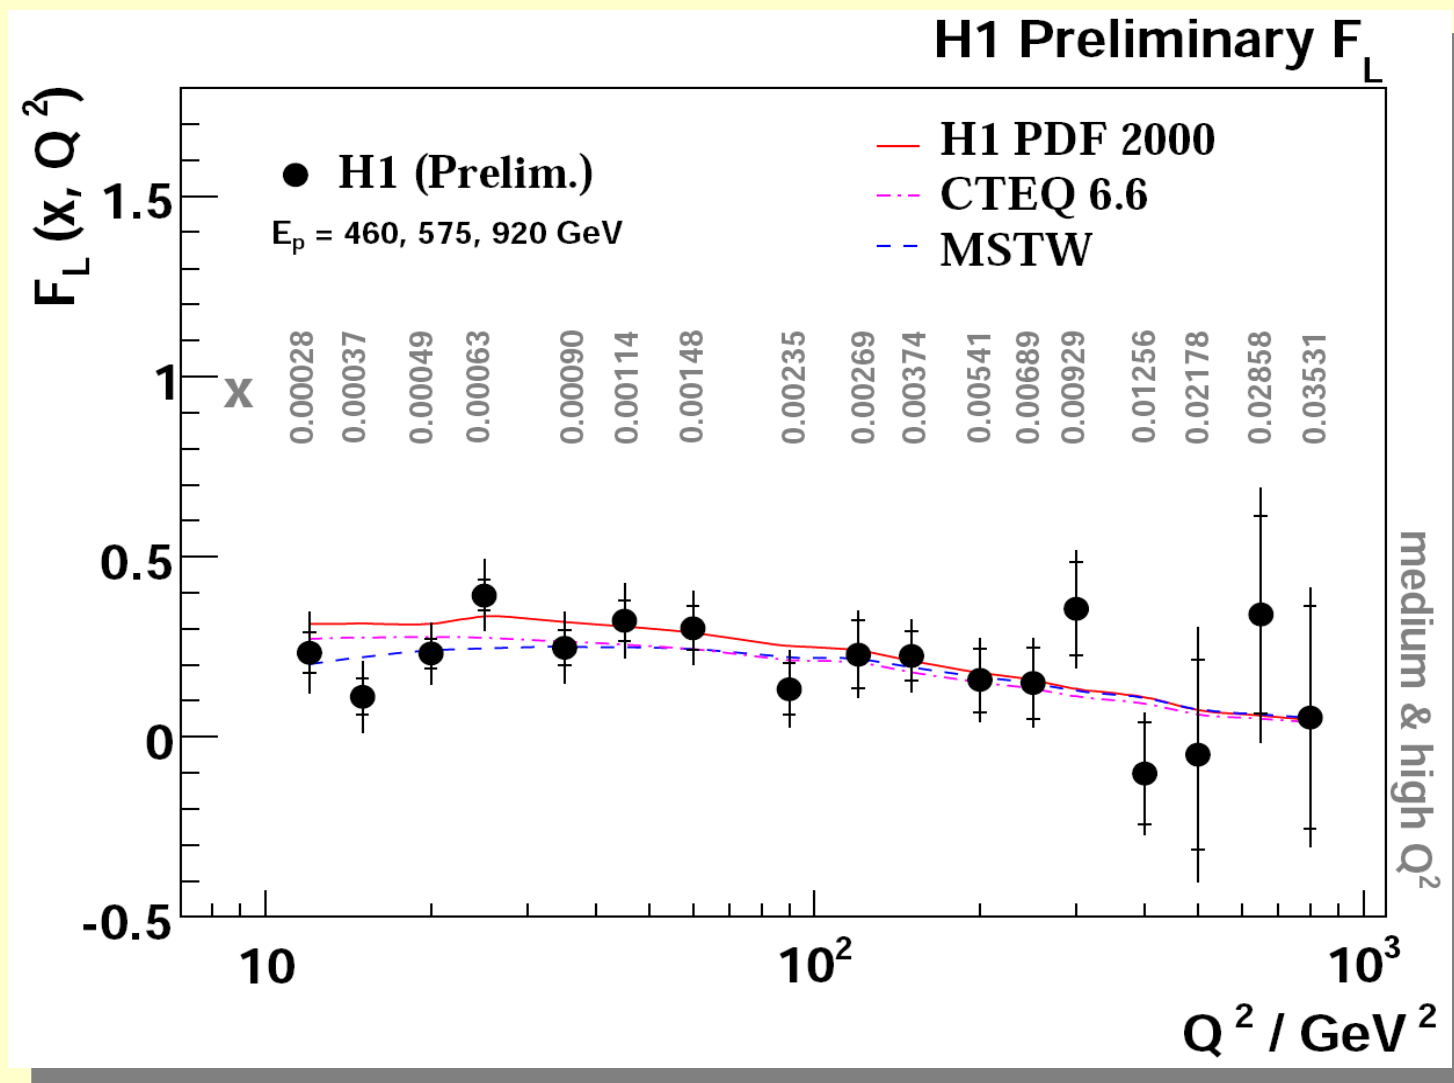

Direct Measurement of F_L

x-averaged F_L as function of Q^2 :

(first F_L results release at Moriond 2008)

→ consistent with QCD prediction

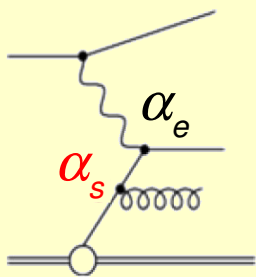

Exclusive Final States

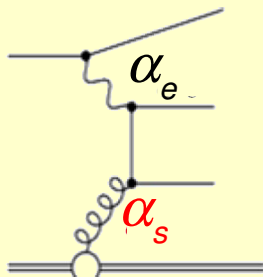

- **Perturbative QCD**
 - jet production and fit of α_s
 - prompt photon production
- **Soft QCD and Diffraction**
 - diffractive dijet photoproduction
- **Physics with Flavours**
 - Search for an exotic D^*p resonance
 - charm production (D^*)
 - F_2^{charm} and F_2^{beauty}

Jets in Deep Inelastic Scattering

QCD-Compton

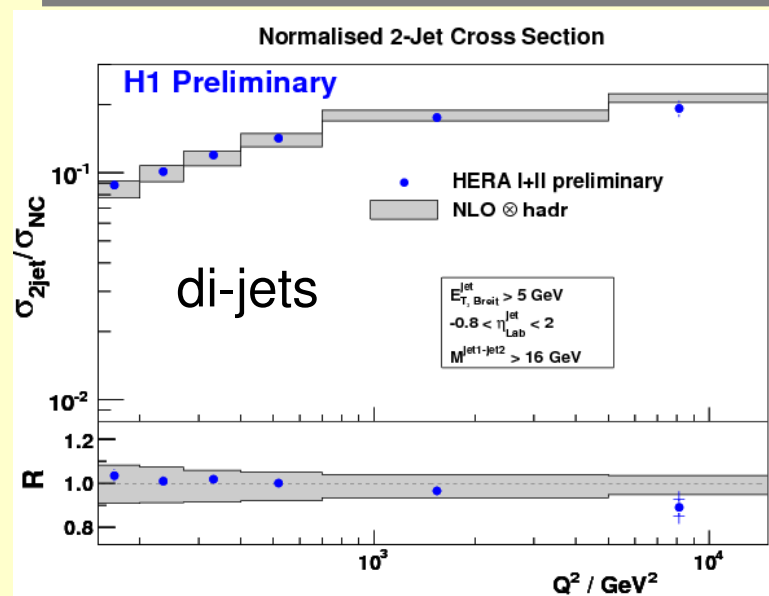

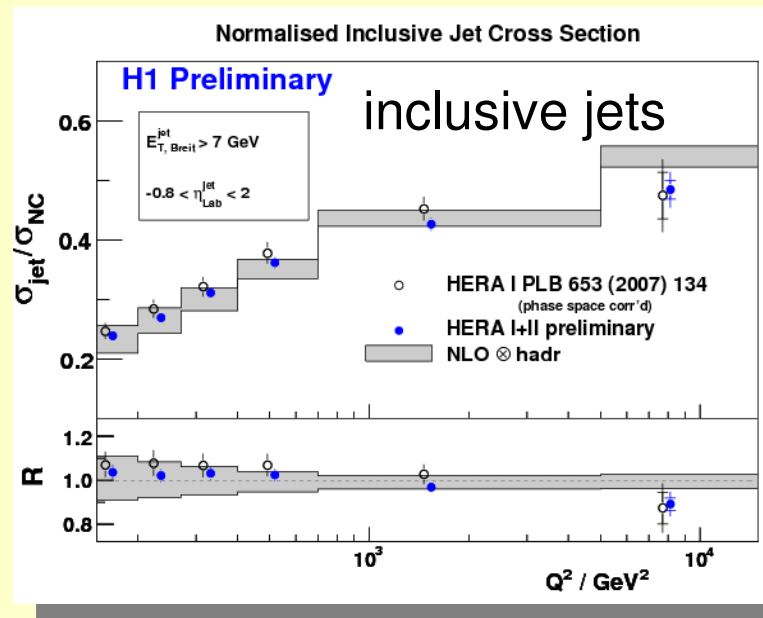

Boson-Gluon-Fusion

measurement of relative jet rates:
 → sensitive to strong coupling
 → partial cancellation of exp. errors

normalised inclusive and 2,3-jet
 rates measured for HERA I+II:

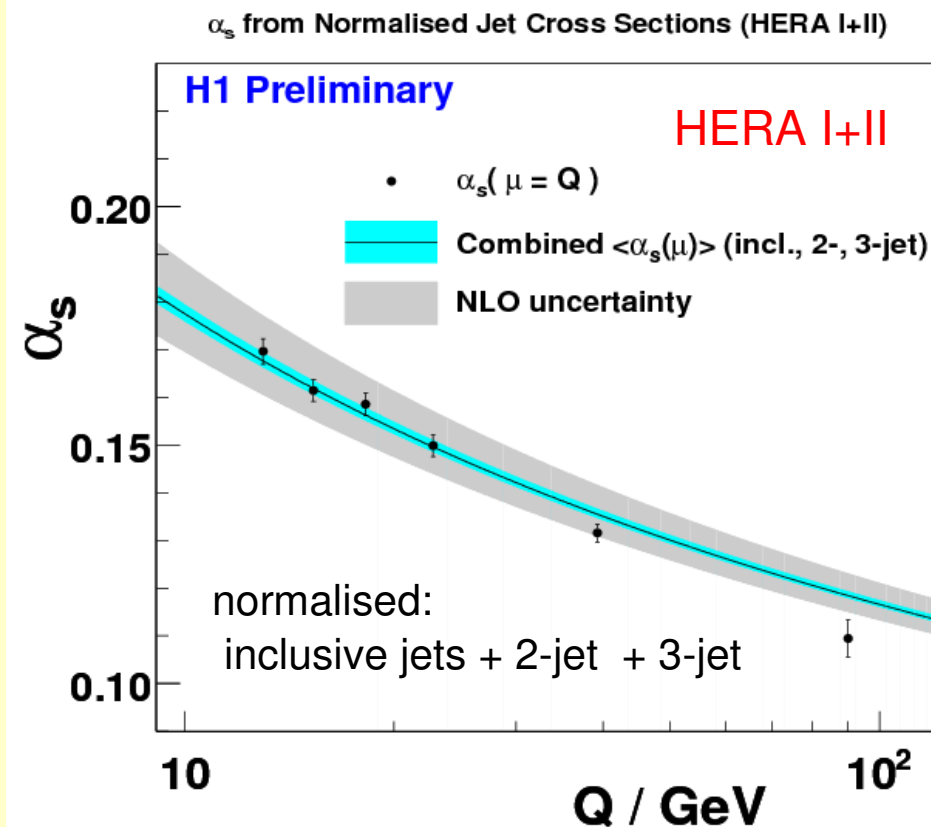

$$Q^2 > 150 \text{ GeV}^2$$

→ fit strong coupling α_s

Strong Coupling α_s

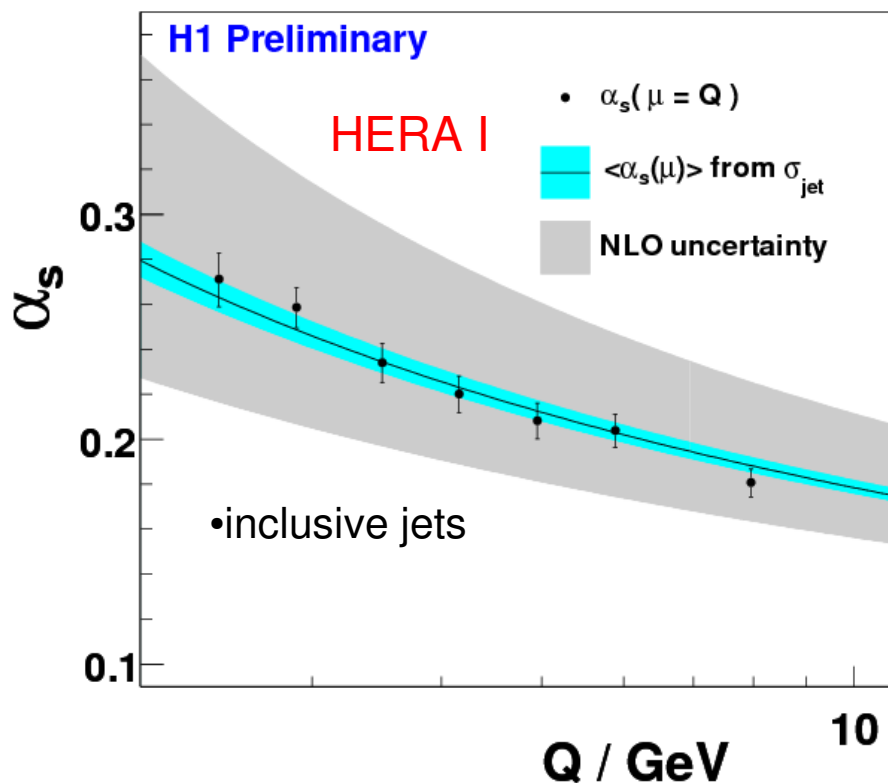

NEW H1: high Q^2

$$\alpha_s = 0.1182 \pm 0.0008(\text{exp.})^{+0.0041}_{-0.0031}(\text{scale}) \pm 0.0018(\text{pdf})$$

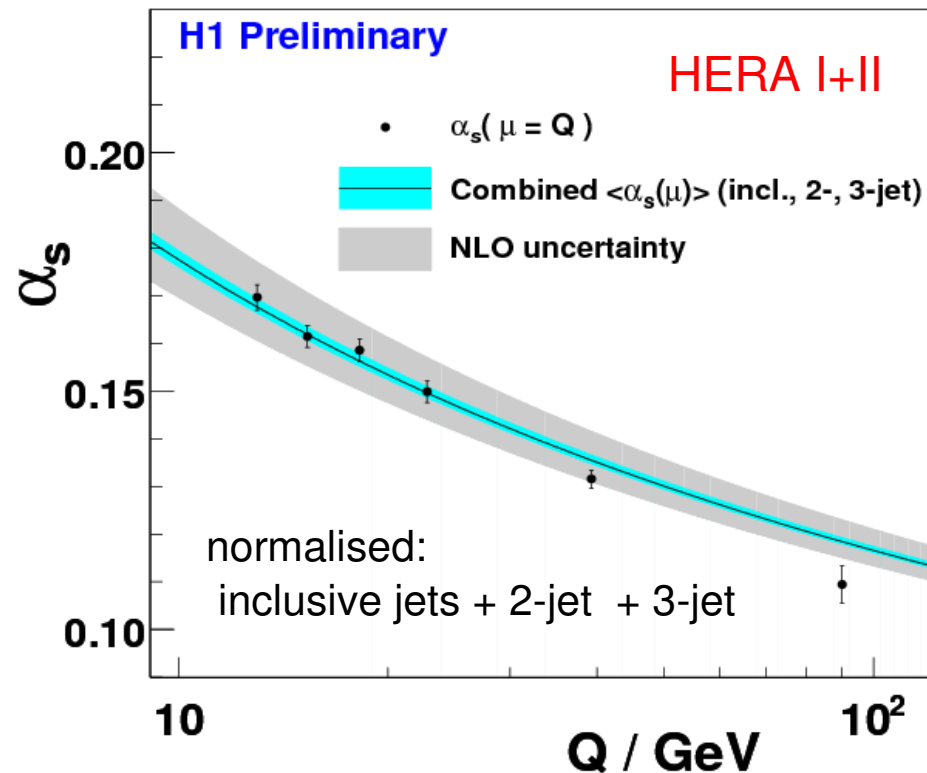

Strong Coupling α_s

α_s from Inclusive Jet Cross Section (HERA-I)

α_s from Normalised Jet Cross Sections (HERA I+II)

NEW H1: low Q^2

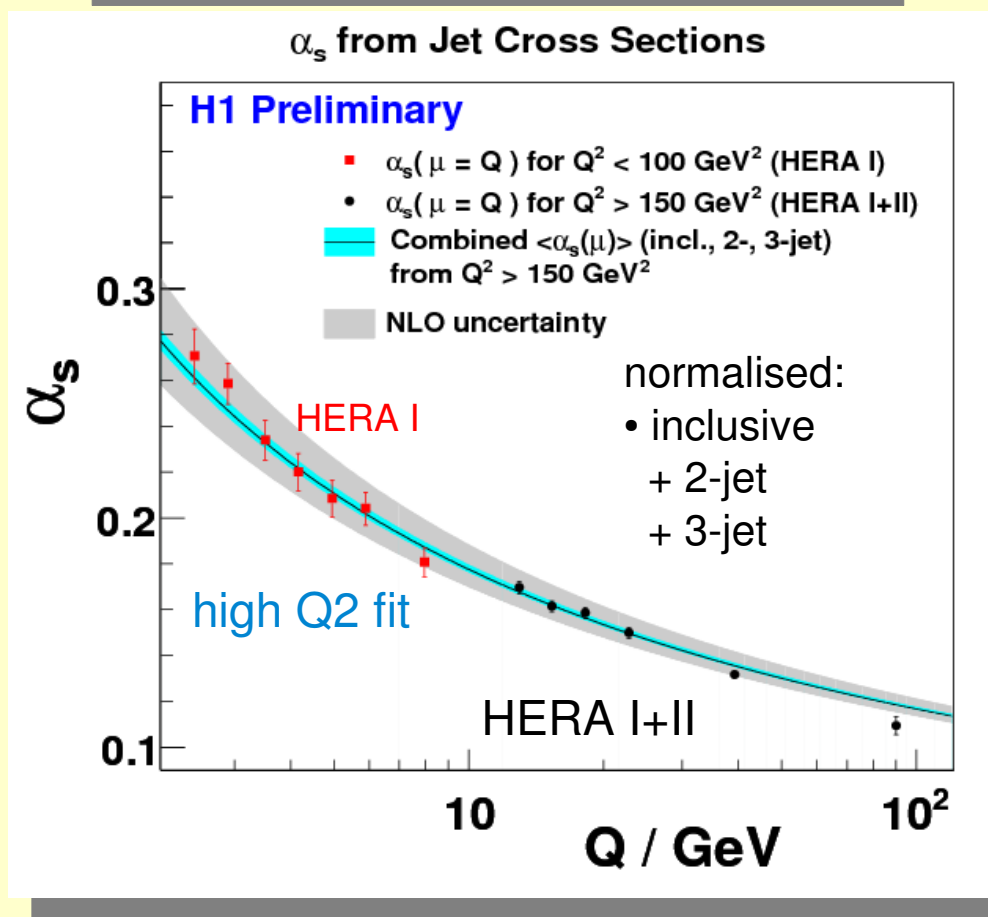

$$\alpha_s = 0.1186 \pm 0.0014(\text{exp.})^{+0.0132}_{-0.0101}(\text{scale}) \pm 0.0021(\text{pdf})$$

NEW H1: high Q^2

$$\alpha_s = 0.1182 \pm 0.0008(\text{exp.})^{+0.0041}_{-0.0031}(\text{scale}) \pm 0.0018(\text{pdf})$$

Strong Coupling α_s

NEW H1: low Q^2

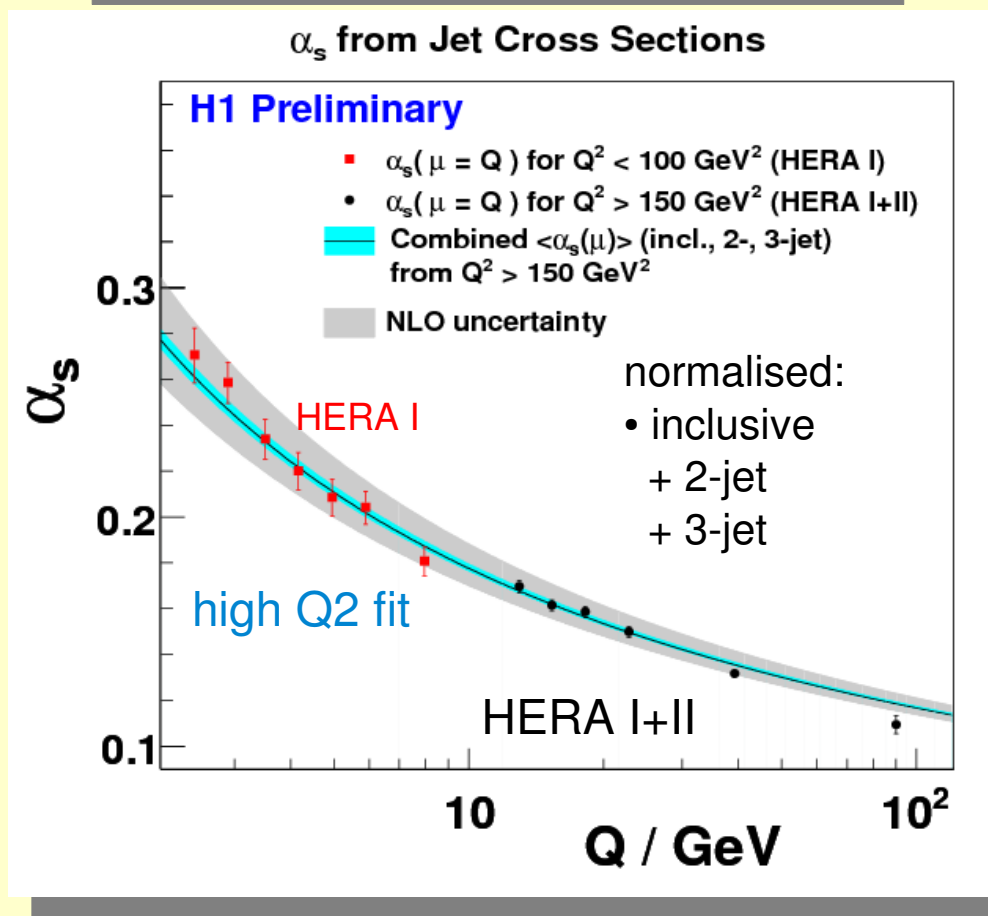

$$\alpha_s = 0.1186 \pm 0.0014(\text{exp.})^{+0.0132}_{-0.0101}(\text{scale}) \pm 0.0021(\text{pdf})$$

NEW H1: high Q^2

$$\alpha_s = 0.1182 \pm \boxed{0.0008(\text{exp.})}^{+0.0041}_{-0.0031}(\text{scale}) \pm 0.0018(\text{pdf})$$

Strong Coupling α_s

NEW H1: low Q^2

$$\alpha_s = 0.1186 \pm 0.0014(\text{exp.})^{+0.0132}_{-0.0101}(\text{scale}) \pm 0.0021(\text{pdf})$$

NEW H1: high Q^2

$$\alpha_s = 0.1182 \pm 0.0008(\text{exp.})^{+0.0041}_{-0.0031}(\text{scale}) \pm 0.0018(\text{pdf})$$

H1/ZEUS combination (2007):

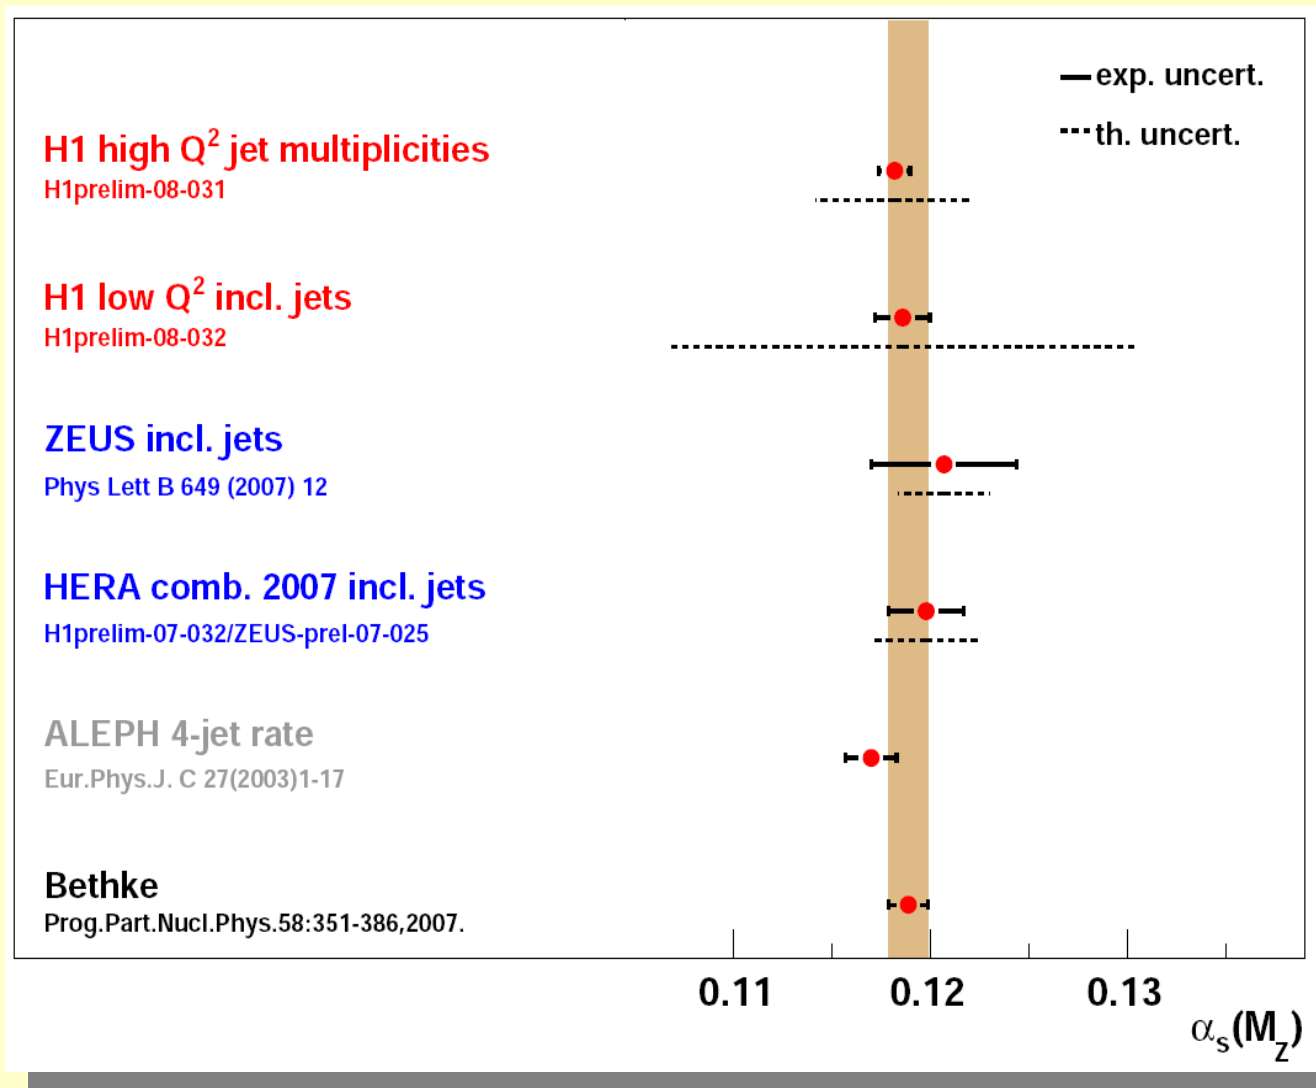

$$\alpha_s = 0.1198 \pm 0.0019(\text{exp.}) \pm 0.0026(\text{theory})$$

all consistent
with world
average !

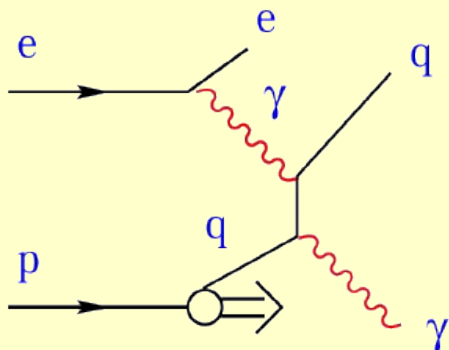

Summary α_s

- experimental error below 1% reached
- unknown NLO scale uncertainty dominating error

Prompt Photons in Photoproduction

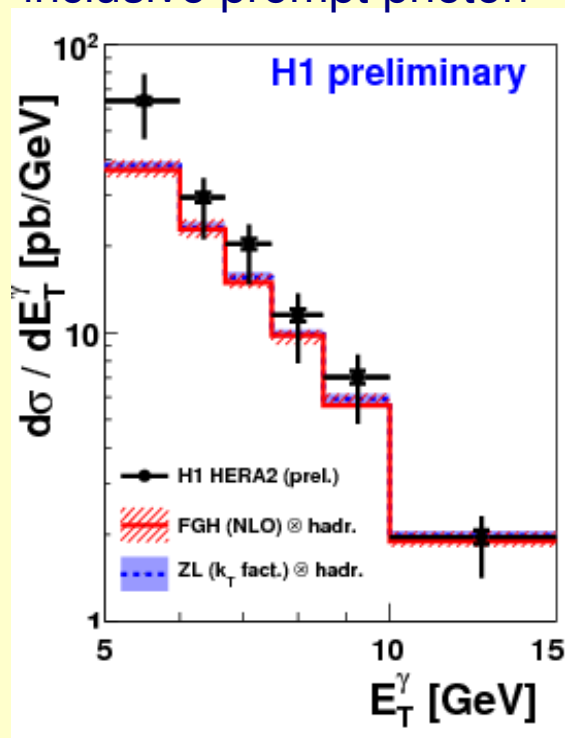

- photon appears directly from hard interaction
→ test of QCD
- important background process also relevant for LHC (e.g. $H \rightarrow \gamma\gamma$)

data compared to models

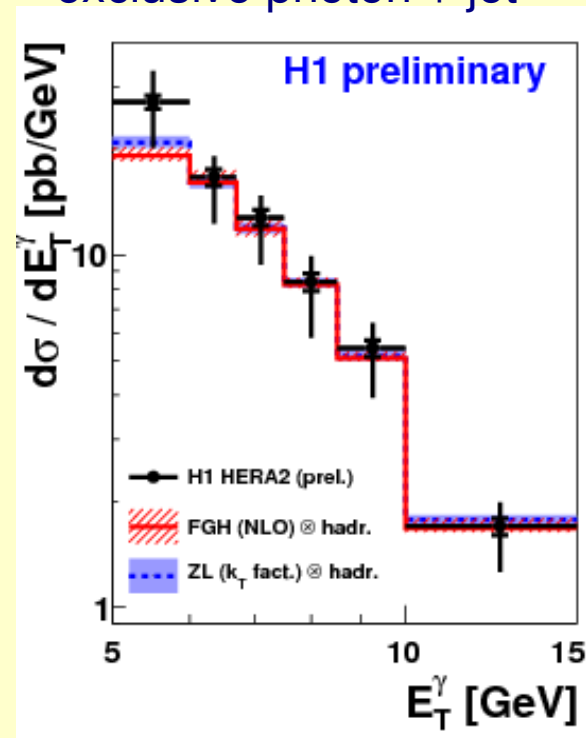

- LO k_T factorisation
(Zotov, Lipatov)
- NLO calculation
(Fontannaz et al.)

general:
good agreement

inclusive prompt photon

exclusive photon + jet

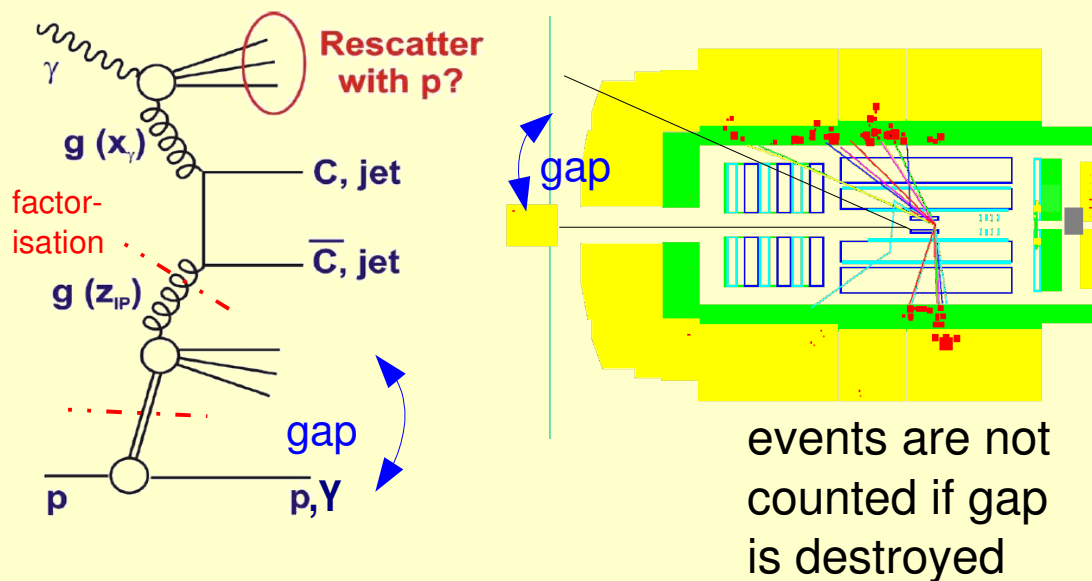

Exclusive Final States

- Perturbative QCD
 - jet production and fit of α_s
 - prompt photon production
- Soft QCD and Diffraction
 - diffractive dijet photoproduction
- Physics with Flavours
 - Search for an exotic D^*p resonance
 - charm production (D^*)
 - F_2^{charm} and F_2^{beauty}

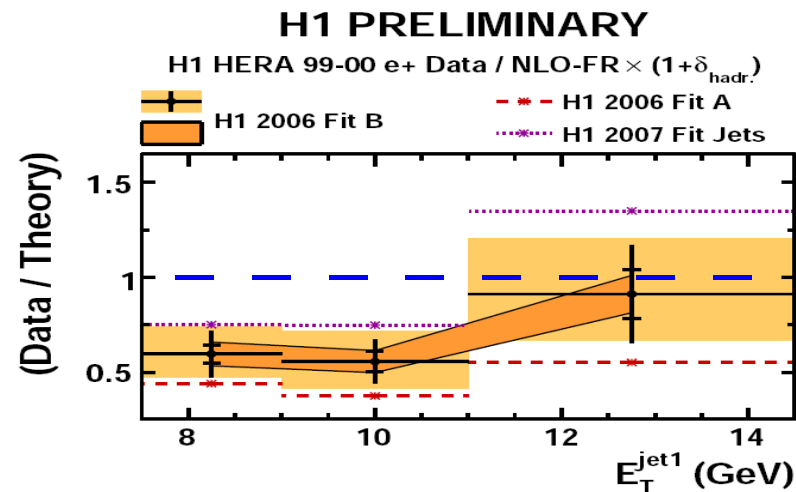

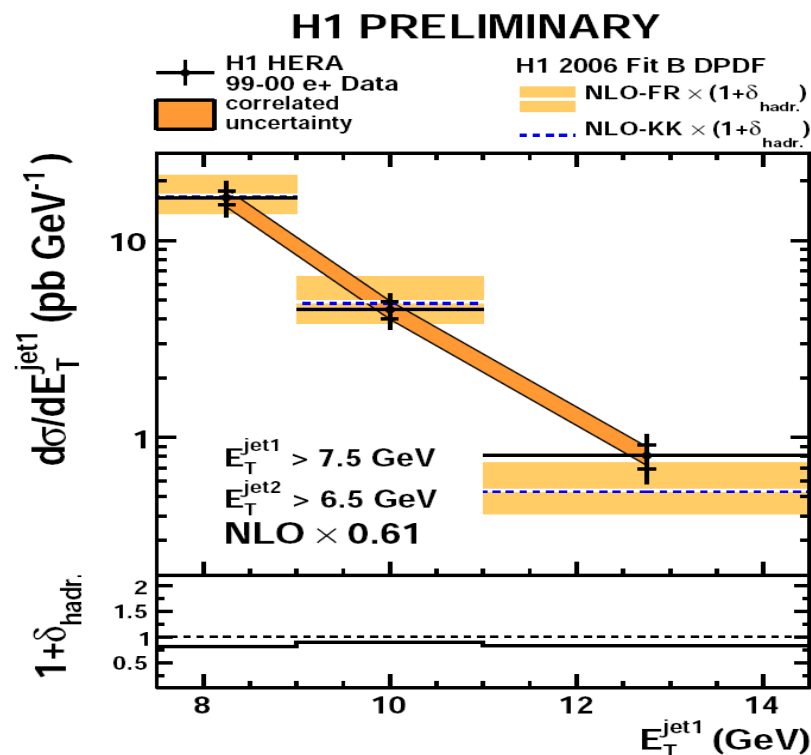

Diffraction Jets in Photoproduction

H1 96-97: $E_T^{\text{jet1}} > 5 \text{ GeV}$ suppression by 0.5
 ZEUS 99-00: $E_T^{\text{jet1}} > 7.5 \text{ GeV}$ weak suppression

both analyses with different E_T cuts repeated by H1 using 99-00 data:

→ consistent with previous H1/ZEUS findings

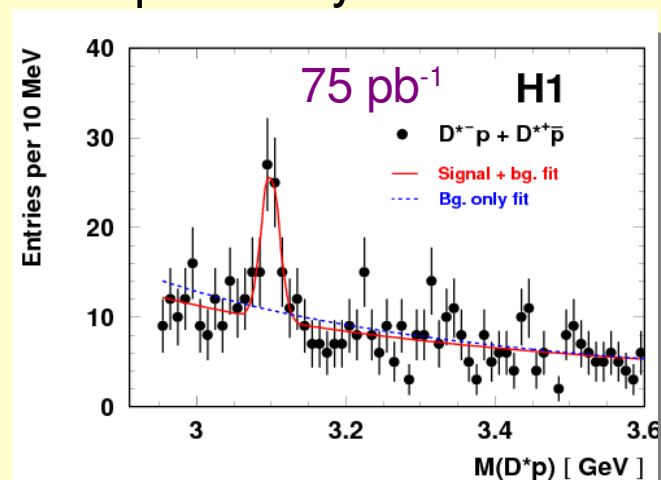

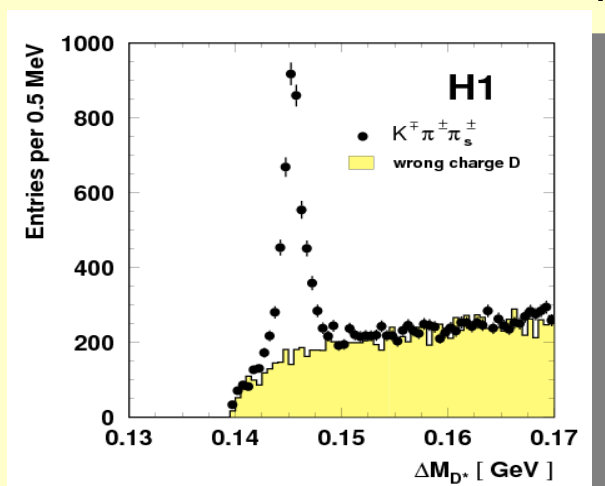

Exclusive Final States

- Perturbative QCD
 - jet production and fit of α_s
 - prompt photon production
- Soft QCD and Diffraction
 - diffractive dijet photoproduction
- Physics with Flavours
 - Search for an exotic D^*p resonance
 - charm production (D^*)
 - F_2^{charm} and F_2^{beauty}

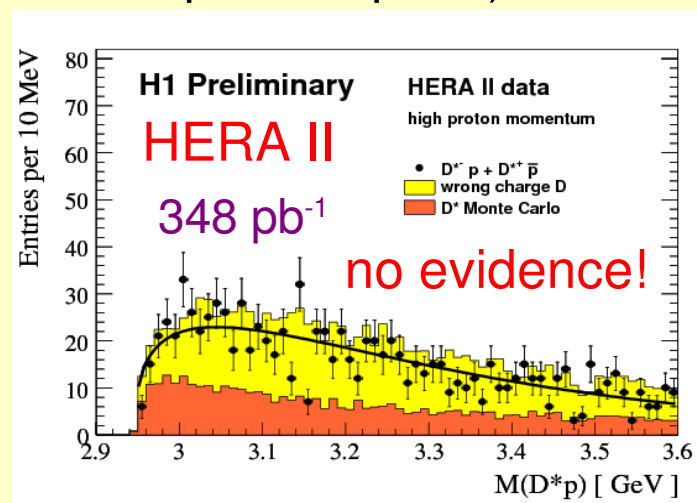

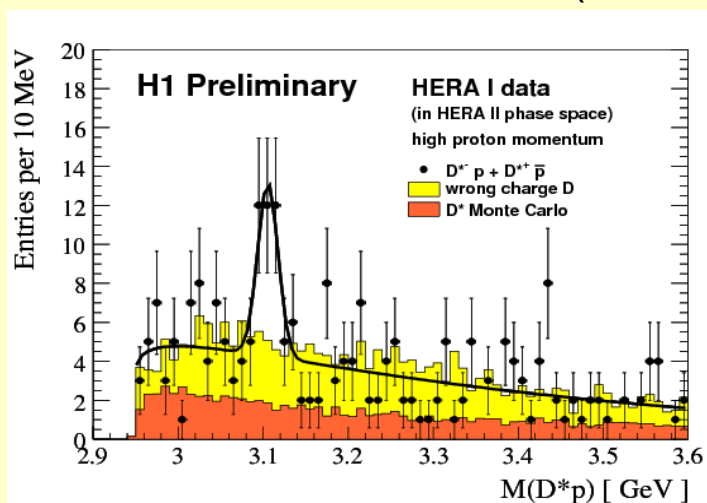

Exotic D^*p Resonance

Evidence for an exotic D^*p resonance reported by H1 at HERA I

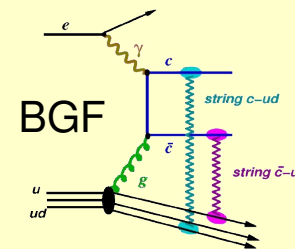

New results from HERA (reduced HERA II phase space)

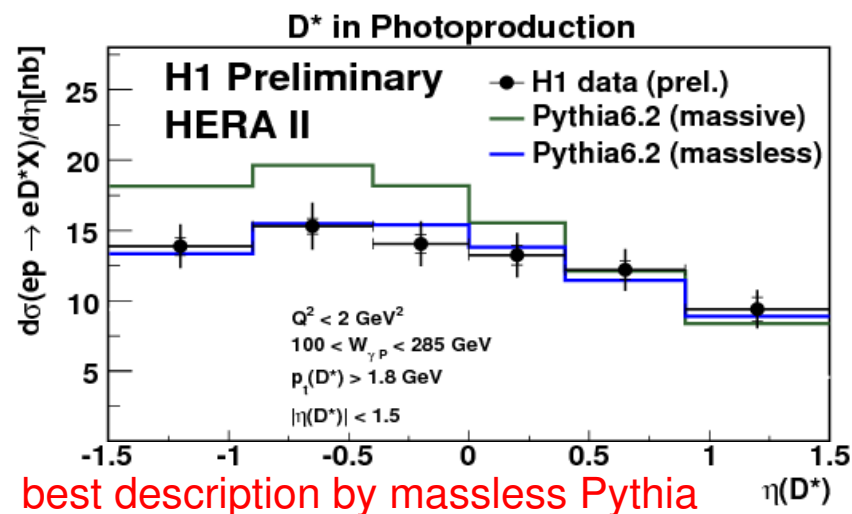

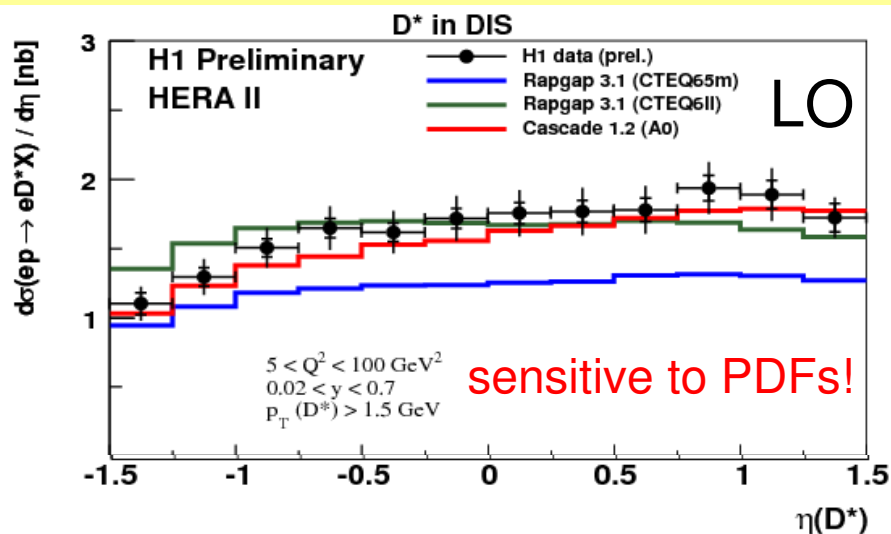

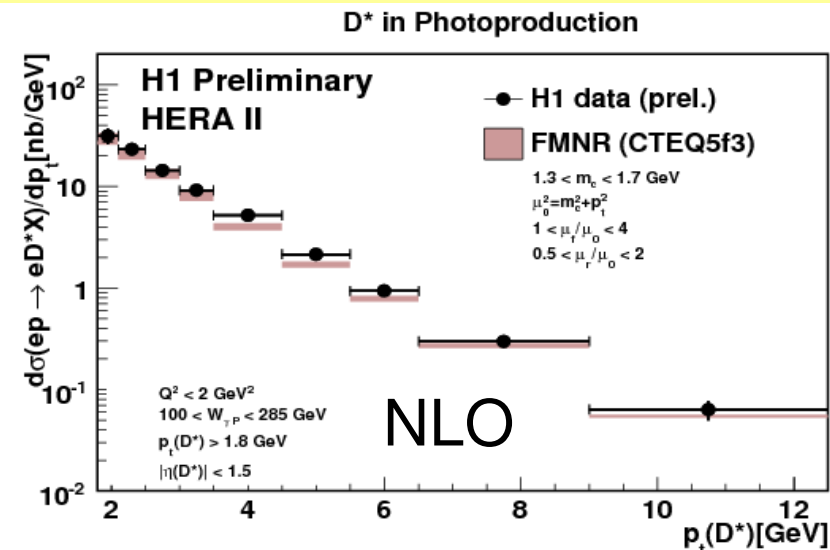

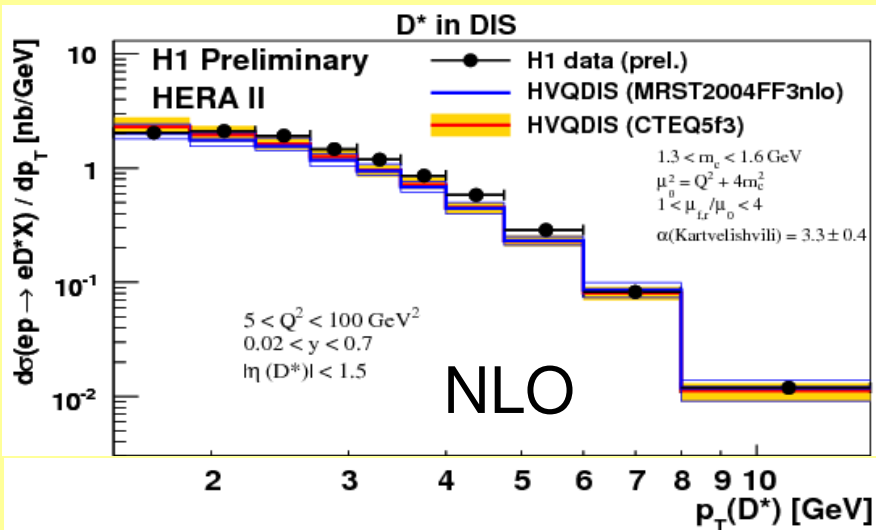

D* Production at HERA II

D* Electroproduction

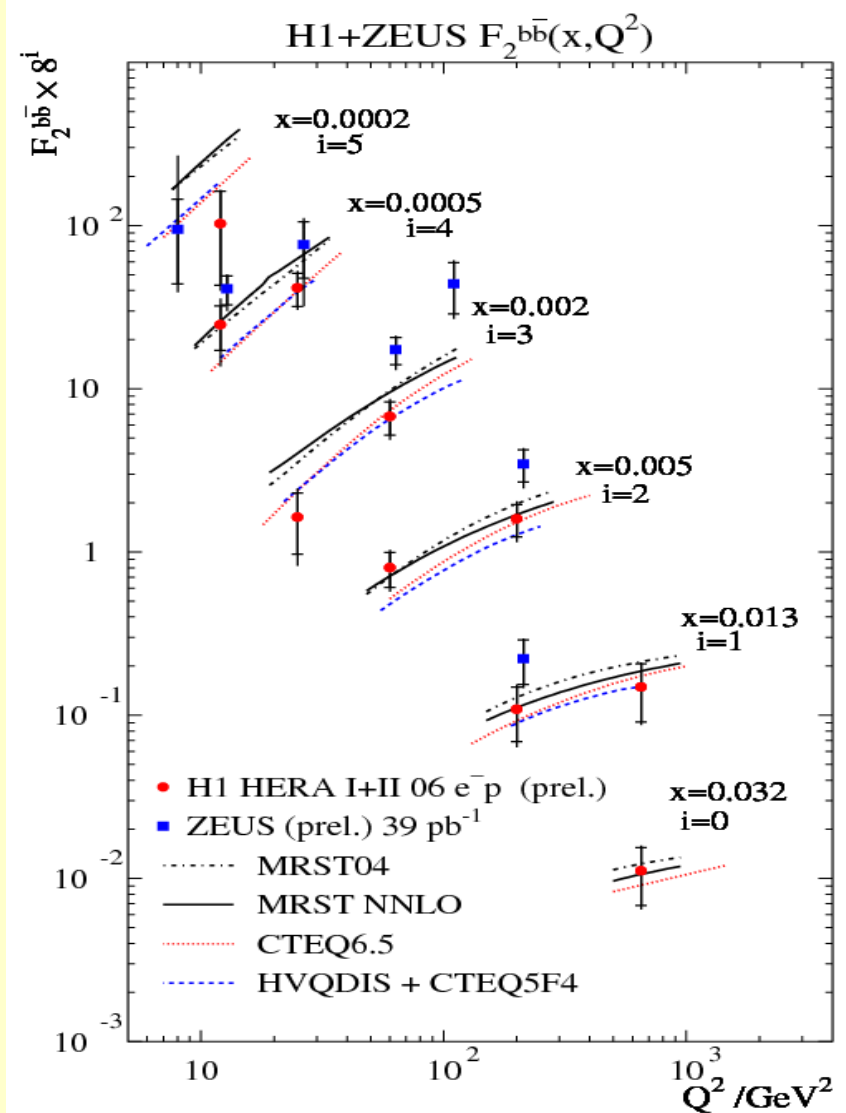

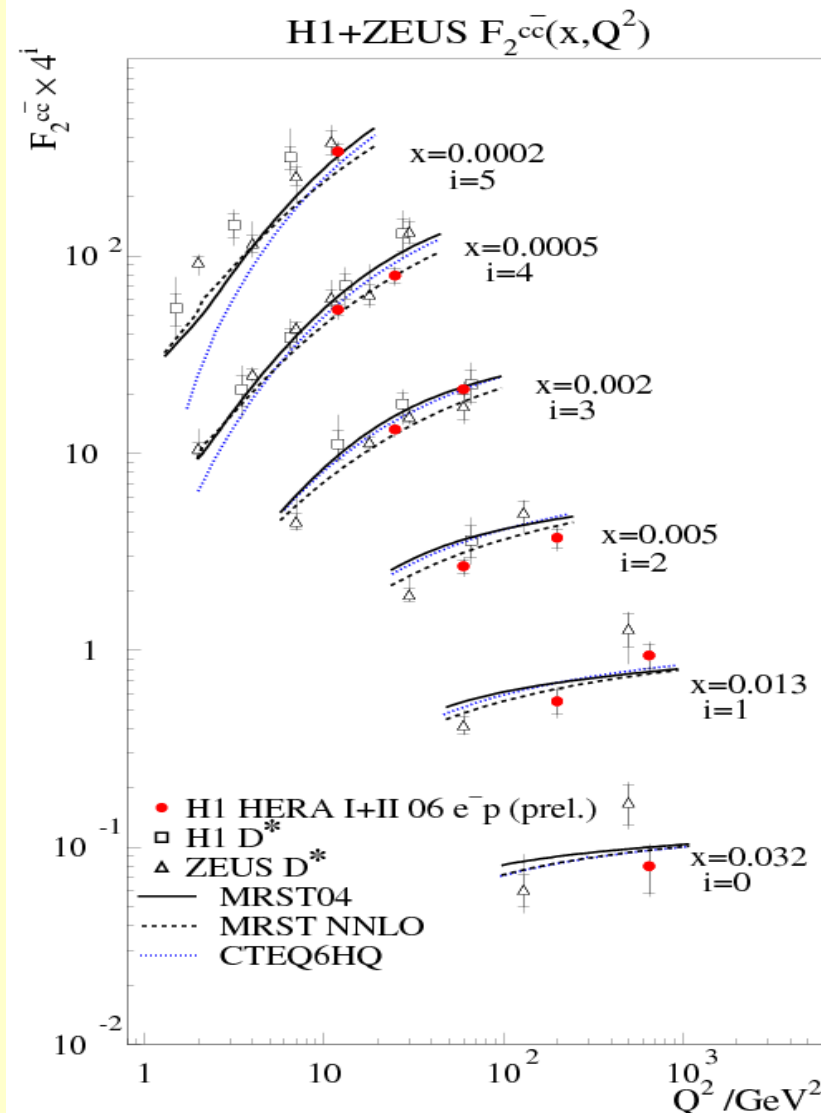

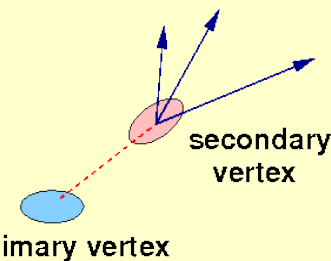

$D^* \rightarrow K\pi\pi$

D* Photoproduction

F_2^{charm} and F_2^{bottom} using lifetime

→ reduced statistical uncertainties

List of New H1 Results

Searches

- Leptoquarks + LFV → Ilias Panagoulas
- Excited Fermions → Marie Jacquet
- W Polarisation and Single Top → Eram Rizvi
- Contact Interactions → Filip Zarnecki
- Multi-Leptons and General Search → Andrea Parenti
- Isolated Leptons → James Ferrando

Inclusive

- Low Q² FL → Biljana Antunovic
- High y Cross-sections and High Q² FL → Vladimir Shekelyan
- H1-ZEUS Structure Function Combinations → Joel Feltesse
- H1-ZEUS Combined Fits → Amanda C.-Sarkar

- covered
- not discussed

Heavy Flavours

- F_{2c} and F_{2b} → Andrew Mehta
- D* Production → Andreas Jung
- D* Fragmentation → Juraj Bracinik
- Inelastic J/Psi → Karin Daum
- Search for a D* ρ resonance → Katja Krueger

Diffraction

- DVCS → Laurent Favart
- Diffractive rho's and phi's in DIS → Xavier Janssen
- Dijets in Photoproduction → Karel Cerny
- Dijet Diffractive PDF's → Paul Laycock

Final States

- Prompt Photons in Photoproduction → Krzysztof Nowak
- Strangeness at Low Q² → Anna Falkiewicz
- Jets in High Q² and α_s → Maxime Gouzevitch
- H1-ZEUS Combined α_s fits → Thomas Kluge
- Charged Particles in DIS → Dan Traynor
- Low x Dynamics with Final States → Jacek Turnau

Summary

Recent highlights from H1:

- finalising **Searches** with full HERA I + HERA II statistics and in combination with ZEUS ($\sim 1\text{fb}^{-1}$)
- first **direct measurement of F_L** at low x
- jets and hadronic final state physics with full HERA data
 - e.g. **α_s** with experimental errors below 1%
- high **precision PDFs** from H1/ZEUS combination

Entering the era of high precision measurements with full HERA data.
